

VIOR EXPANDS SURFACE GOLD SHOWING FOOTPRINT AT BELLETERRE AND STRENGTHENS ITS EXPLORATION TEAM

Montreal, Canada, November 9, 2022 – Vior Inc. (“Vior” or the “Corporation”), (TSX-V: VIO, OTC: VIORF and FRANKFURT: VL51) is pleased to announce additional field exploration results that indicate strong high-grade gold potential at its Quebec-based district-scale Belleterre gold project (“**Belleterre**” or “**Project**”) in the Abitibi-Témiscamingue region. These new findings are from samples collected during the Summer 2022 field exploration program. The current gold results are located 250 metres (“m”) southwest of the Lac Paradis results that were previously published on [January 28, 2022](#).

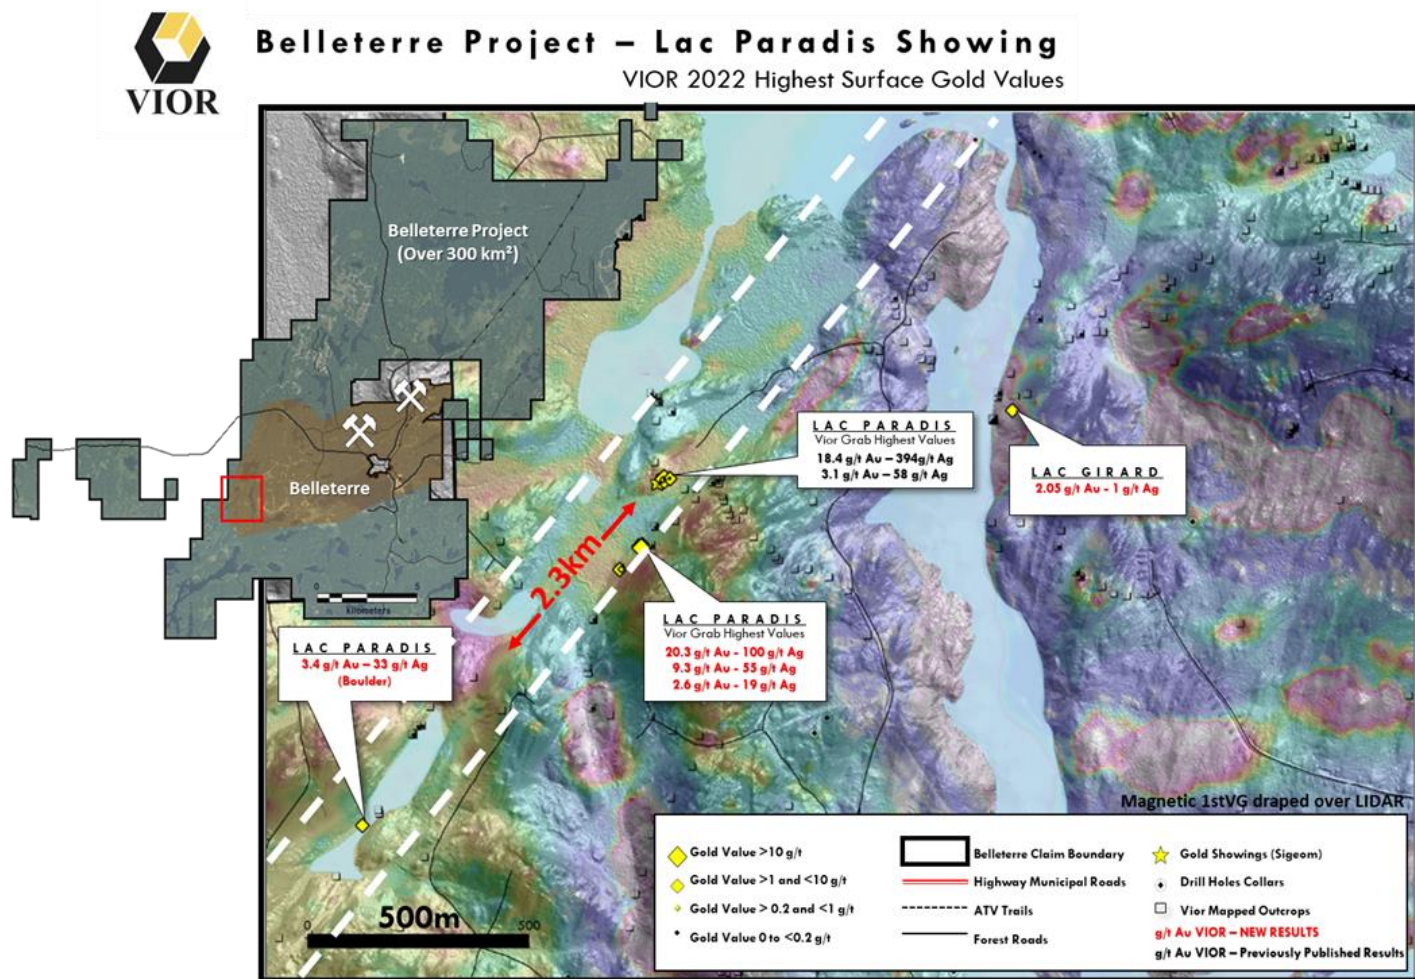

Mark Fedosiewich, President & CEO of Vior, stated, “We are very encouraged by these new results. The Lac Paradis showing was already recognized as one of many strong exploration targets at Belleterre, and these new surface results reconfirm the extension potential. The Lac Paradis showing, located 10 kilometres (“km”) from the historic Belleterre mining camp, reinforces the exceptional regional gold footprint at Belleterre.”

Additional communications will be disclosed in due course as Vior’s technical team advances on a global compilation and drill-targeting program at Belleterre.

Lac Paradis Showing

The Lac Paradis showing confirmed in Vior’s 2021 preliminary validation program, was first discovered in the 1940’s and was minimally explored at that time by shallow drilling. This prospective region occurs within the southwest extension of the Belleterre mining camp’s historic brownfield area. Specifically, the showing is located 10 km from the past-producing area and is situated in a major 2.3km NE-SW sheared deformation corridor within Vior’s property (refer to [Map 1](#) and [Map 2](#)). The multi-kilometer structure that encompasses the Lac Paradis gold showing has been confirmed by geophysics, LIDAR and field observation descriptions. The high-grade mineralised sample results being reported in this press release (refer to [Table 1](#)), confirm a significant expansion of the historic Lac Paradis showing footprint, with a 250m long by 50m to 100m wide new prospective area. The mineralised system is wider and more extended than previous data suggested, and has a multi-kilometer major sheared deformation corridor that remains open along both the NE and SW extensions.

The main lithology surrounding the gold values are granodiorite, felsic and some mafic intrusives. Evidence of multi-metre to 10m wide strong deformation zones have been observed and include silicification, chlorite, carbonate, and sericite alterations. Locally, fuchsite alteration has also been recognised at the newly discovered gold showing at Lac Girard, 500m to the northeast. Gold values are reported mainly in quartz veining with 1-3% disseminated pyrite and traces of chalcopryite. Silver is an important component of the mineralisation in the area, and may subsequently become of economic interest. The Lac Paradis area's expanded footprint represents an excellent exploration and drill targeting area that will be integrated into Vior's regional drill targeting program.

VIOR 2022 Detailed Surface Gold Values and Deformation Zone

Map 2. Detailed locations of Vior’s highest gold values at Lac Paradis.

Showing Name	Sample Number	UTM NAD83 Easting	UTM NAD83 Northing	Au G/T	Ag G/T	Sample Type	Sample Description	
Lac Paradis	B00474909	666548	5249454	18.4	394	Outcrop	10 to 20 cm-thick quartz vein in a shear zone hosted by granodiorite; 2% pyrite and traces of chalcopyrite.	Previously published
	B00474912	666561	5249455	3.1	58	Boulder	Fragments of quartz vein hosted in granodiorite in an old blasted pit; 1% pyrite and traces of chalcopyrite	Previously published
	B00326712	666493	5249298	20.3	101	Outcrop	Quartz veining in mafic intrusive rock, traces of pyrite and carbonates	New Results
	B00326682	666495	5249305	9.3	55	Outcrop	10 cm quartz vein with 5% disseminated pyrite	New Results
	B00326673	665864	5248668	3.4	33	Boulder	Quartz flooding shear zone boulder with trace pyrite	New Results
	B00326681	666488	5249302	2.6	19	Outcrop	Quartz veining in major shear zone with 3% disseminated pyrite	New Results

Table 1. Belleterre Project – Lac Paradis gold and silver values from Summer 2022 exploration program (see Press Release of January 28, 2022).

Throughout Vior's Summer 2022 surface exploration program, the geological team completed regional outcrop mapping and rock sampling, focused mainly on the Blondeau-Guillet area of the Belleterre property (see press release of [August 25, 2021](#)). The exploration initiative concluded with over 1500 registered outcrops and 636 samples taken. The sample highlights reported in this press release represent only those gold results proximal to the Lac Paradis area.

Vior Strengthens its Exploration Team

Vior is pleased to announce the appointment of Mr. Benjamin (Ben) Cleland as Senior Exploration Manager. Ben is a Professional Geologist with over 14 years of experience in exploration, covering a wide range of deposit types, including Mesothermal and Epithermal Gold, NI-CU-PGE, VMS and industrial minerals. Ben has held number of progressive positions in the mining industry, most notably, having contributed to the exploration success at the Hardrock Deposit (Ontario), owned by Greenstone Gold Mines. As Manager of Geology, he led the regional exploration in the Beardmore-Geraldton Belt and helped advance the detailed resource delineation of the Hardrock Deposit to a 4 million ounce resource estimate published in 2016.

Mark Fedosiewich, President and CEO of Vior, stated, "We are excited to announce the recent addition of Ben to our Technical team. Ben brings with him the experience and skillset that will help accelerate the exploration and discovery process at our flagship Belleterre gold project. We look forward to his contributions in advancing Vior's value creation process."

About QA/QC Controls

Vior has implemented a quality assurance and quality control (QA/QC) program to ensure sampling and analysis of all exploration work is conducted in accordance with industry best practices, including certified reference material (CRM) standards and blank material inserted every 20 samples. Sample preparation and gold analyses were performed either at Activation Laboratories Ltd (Actlabs) in Sainte-Germaine-Boulé, QC or by SGS Canada Inc with a preparation of samples performed at the SGS Sudbury and analysis of samples performed at the SGS Burnaby site in BC. All samples were analyzed for gold by fire-assays (50g) and finished with an atomic absorption finish or ICP-AES technique. Repeats were conducted by fire-assay (50g) followed by gravimetric testing on each sample containing more than 3.0 g/t Au. Selected samples are also analyzed for multi-elements, including silver, using a four-acid digestion finish ICP-MS method. High grade silver was repeated by aqua regia digestion ICP-OES finish.

About Belleterre

The Belleterre property is located near the town of Belleterre in the Abitibi-Témiscamingue region of Quebec, 95 km south of Rouyn-Noranda, QC. The property consists of 551 claims over an area of 30,258 hectares (302.6 sq km), forming a district-scale exploration package that extends over a strike length of 37 km. The Project includes the option to acquire the former high-grade Belleterre Gold Mine that produced over 750,000 oz. gold (Au) at 10.73 grams per tonne ("g/t") and 95,000 oz. silver (Ag) at 1.73 g/t between 1936 and 1959 (Source: Sigeom MERN). The property has been under-explored over the past 60 years and has never been the subject of such significant consolidation until now. More on Belleterre can be found [HERE](#).

About Vior Inc.

Vior is a hybrid junior mining exploration company based in Quebec whose corporate strategy is to generate, explore and develop high-quality projects in proven and favourable mining jurisdictions in North America. Through the years, Vior's management and technical teams have demonstrated their ability to discover several gold deposits and many high-quality mineral prospects.

Qualified Persons

Forward-Looking Statements

This news release contains forward-looking statements. All statements, other than of historical facts, that address activities, events or developments that the Corporation believes, expects or anticipates will or may occur in the future including, without limitation, the planned exploration program on the Belleterre project, the expected positive exploration results, the timing of the exploration results, the ability of the Corporation to continue with the exploration program, the availability of the required funds to continue with the exploration and the approval from the Ministère de l'énergie et des ressources naturelle ("MERN") of the request for abandonment of the two mining concessions filed by 9293-0122 Québec Inc. are forward-looking statements. Forward-looking statements are generally identifiable by use of the words "will", "should", "continue", "expect", "anticipate", "estimate", "believe", "intend", "to earn", "to have", "plan" or "project" or the negative of these words or other variations on these words or comparable terminology. Forward-looking statements are subject to a number of risks and uncertainties, many of which are beyond the Corporation's ability to control or predict, that may cause the actual results of the Corporation to differ materially from those discussed in the forward-looking statements. Factors that could cause actual results or events to differ materially from current expectations include, among other things, failure to meet expected, estimated or planned exploration expenditures, the possibility that future exploration results will not be consistent with the Corporation's expectations, general business and economic conditions, changes in world gold markets, sufficient labour and equipment being available, changes in laws and permitting requirements, unanticipated weather changes, title disputes and claims, environmental risks, the refusal by the MERN to approve the request for abandonment of the two mining concessions held by 9293-0122 Québec Inc. as well as those risks identified in the Corporation's annual Management's Discussion and Analysis. Should one or more of these risks or uncertainties materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described and accordingly, readers should not place undue reliance on forward-looking statements. Although the Corporation has attempted to identify important risks, uncertainties and factors which could cause actual results to differ materially, there may be others that cause results not to be as anticipated, estimated or intended. The Corporation does not intend, and does not assume any obligation, to update these forward-looking statements except as otherwise required by applicable law.
