VIOR GOLD CORPORATION

CORPORATE PRESENTATION

NOVEMBER 2026

TSXV: **VIO** · OTCQB: **VIORF** · FRANKFURT: **VL5**

FORWARD-LOOKING STATEMENTS

& Technical Content

Statements in this document, to the extent not based on historical events, constitute forward-looking statements. Forward-looking statements include, without limitation, statements evaluating market and general economic conditions in the following sections, and statements regarding future-oriented costs and expenditures.

Investors are cautioned not to place undue reliance on these forward-looking statements that reflect management's analysis only as of the date thereof.

These forward-looking statements are subject to certain risks and uncertainties that could cause actual results to differ materially. Such risks and uncertainties with respect to the company include the effects of general economic conditions, changing foreign exchange rates and actions by government authorities, uncertainties associated with legal proceedings and negotiations, industry supply levels, competitive pricing pressures and misjudgements in the course of preparing forward-looking statements.

The technical information in this presentation has been reviewed and approved by Pascal Simard, P.Eng., Vice-President Exploration, a non-independent qualified person as defined by National Instrument 43-101 (NI 43-101) Standards of Disclosure for Mineral Exploration Projects.

Historical results on the Ligneris, Launay and Kinebik Project described in this presentation are from public sources and the Qualified Person responsible for the review and approval of the technical information disclosed in this presentation (see details above) has not verified the information relating to these historical results. Consequently, such information is not necessarily indicative of mineralization on the Ligneris, Launay and Kinebik Project.

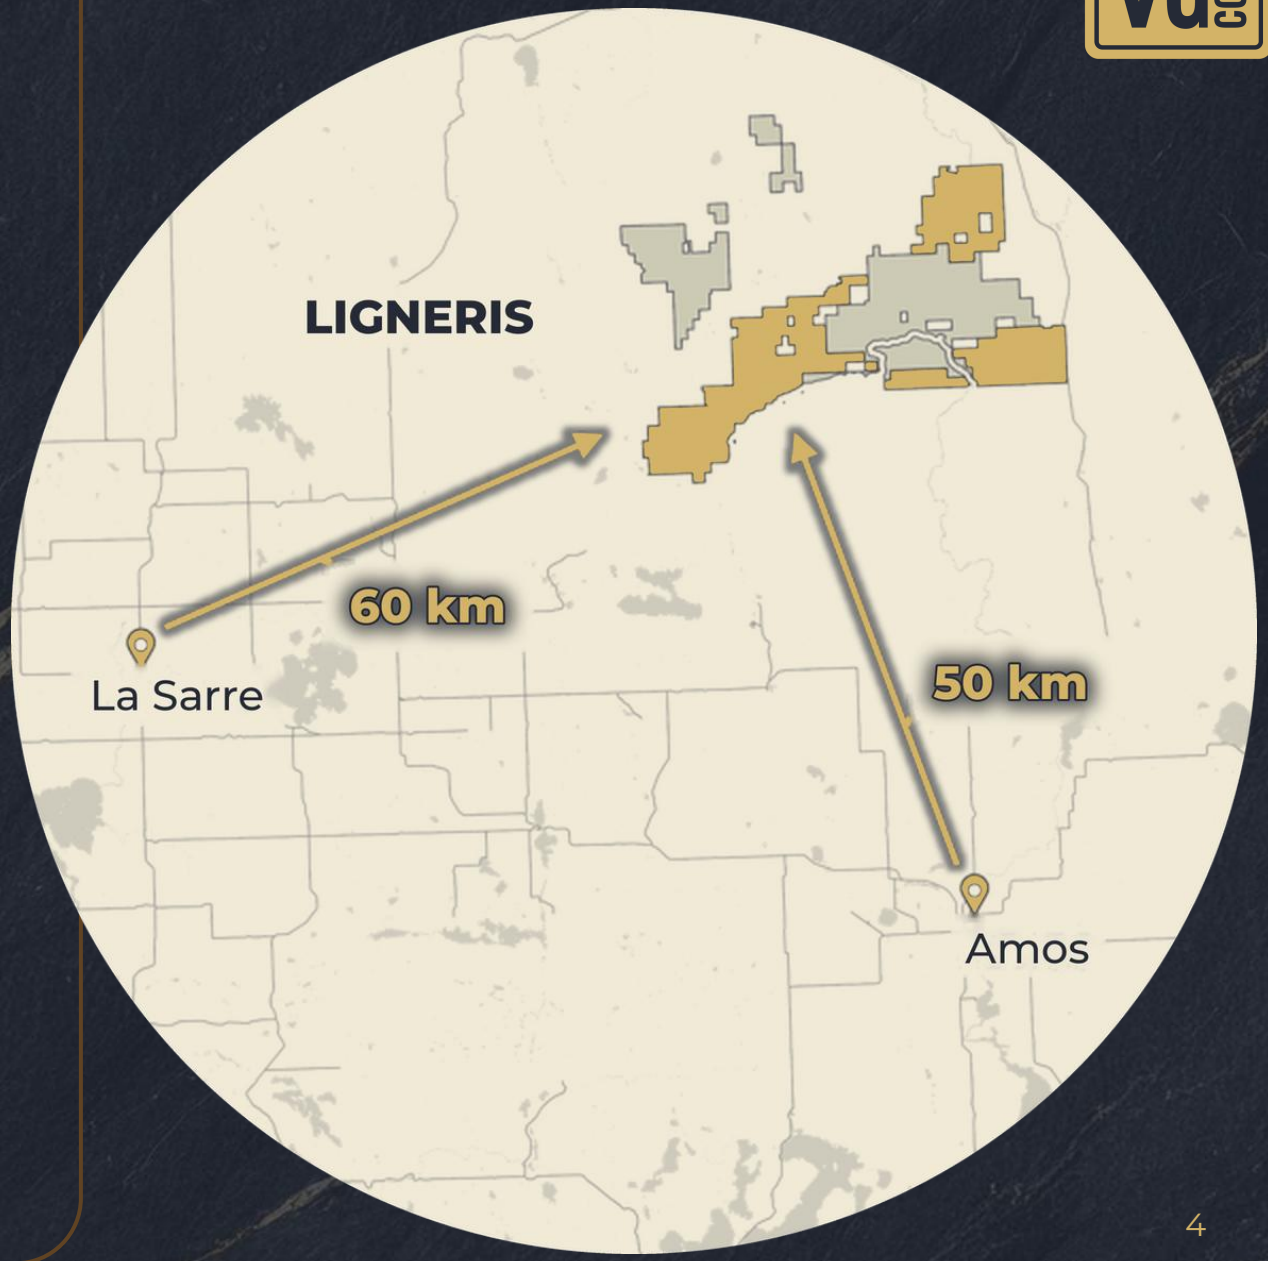

UNLOCKING VALUE THROUGH DISCOVERIES

LIGNERIS PROJECT

Highlights & Opportunities

- Located 50 km NO of Amos, Quebec.
- 1,023 claims covering > 530 km^2.
- Excellent location and low-cost exploration.
- Orogenic Au and Gold-rich polymetallic VMS-related mineralization (Bousquet-LaRonde type deposits) untested at depth and along strike.
- More than 50km along fertile felsic volcanic belt.
- Recent results : LI-26-002: 35.2 g/t Au / 3.0 m
  LI-26-002: 21.6 g/t Au / 3.0 m
  LI-26-010 EXT : 7.94 g/t Au / 4.0m
  LI-26-005: 5.64 g/t Au / 4.0 m
  LI-26-038: 6.43 g/t Au / 4.9 m
- Current 30,000 m drill program.

Nobody Wanted the Richest Gold Mines in the World

Analysis of the top-10 gold mines in North & South America Reveals Most Were Abandoned Multiple Times, or Sat Totally Stagnant, or Even Went into Bankruptcy

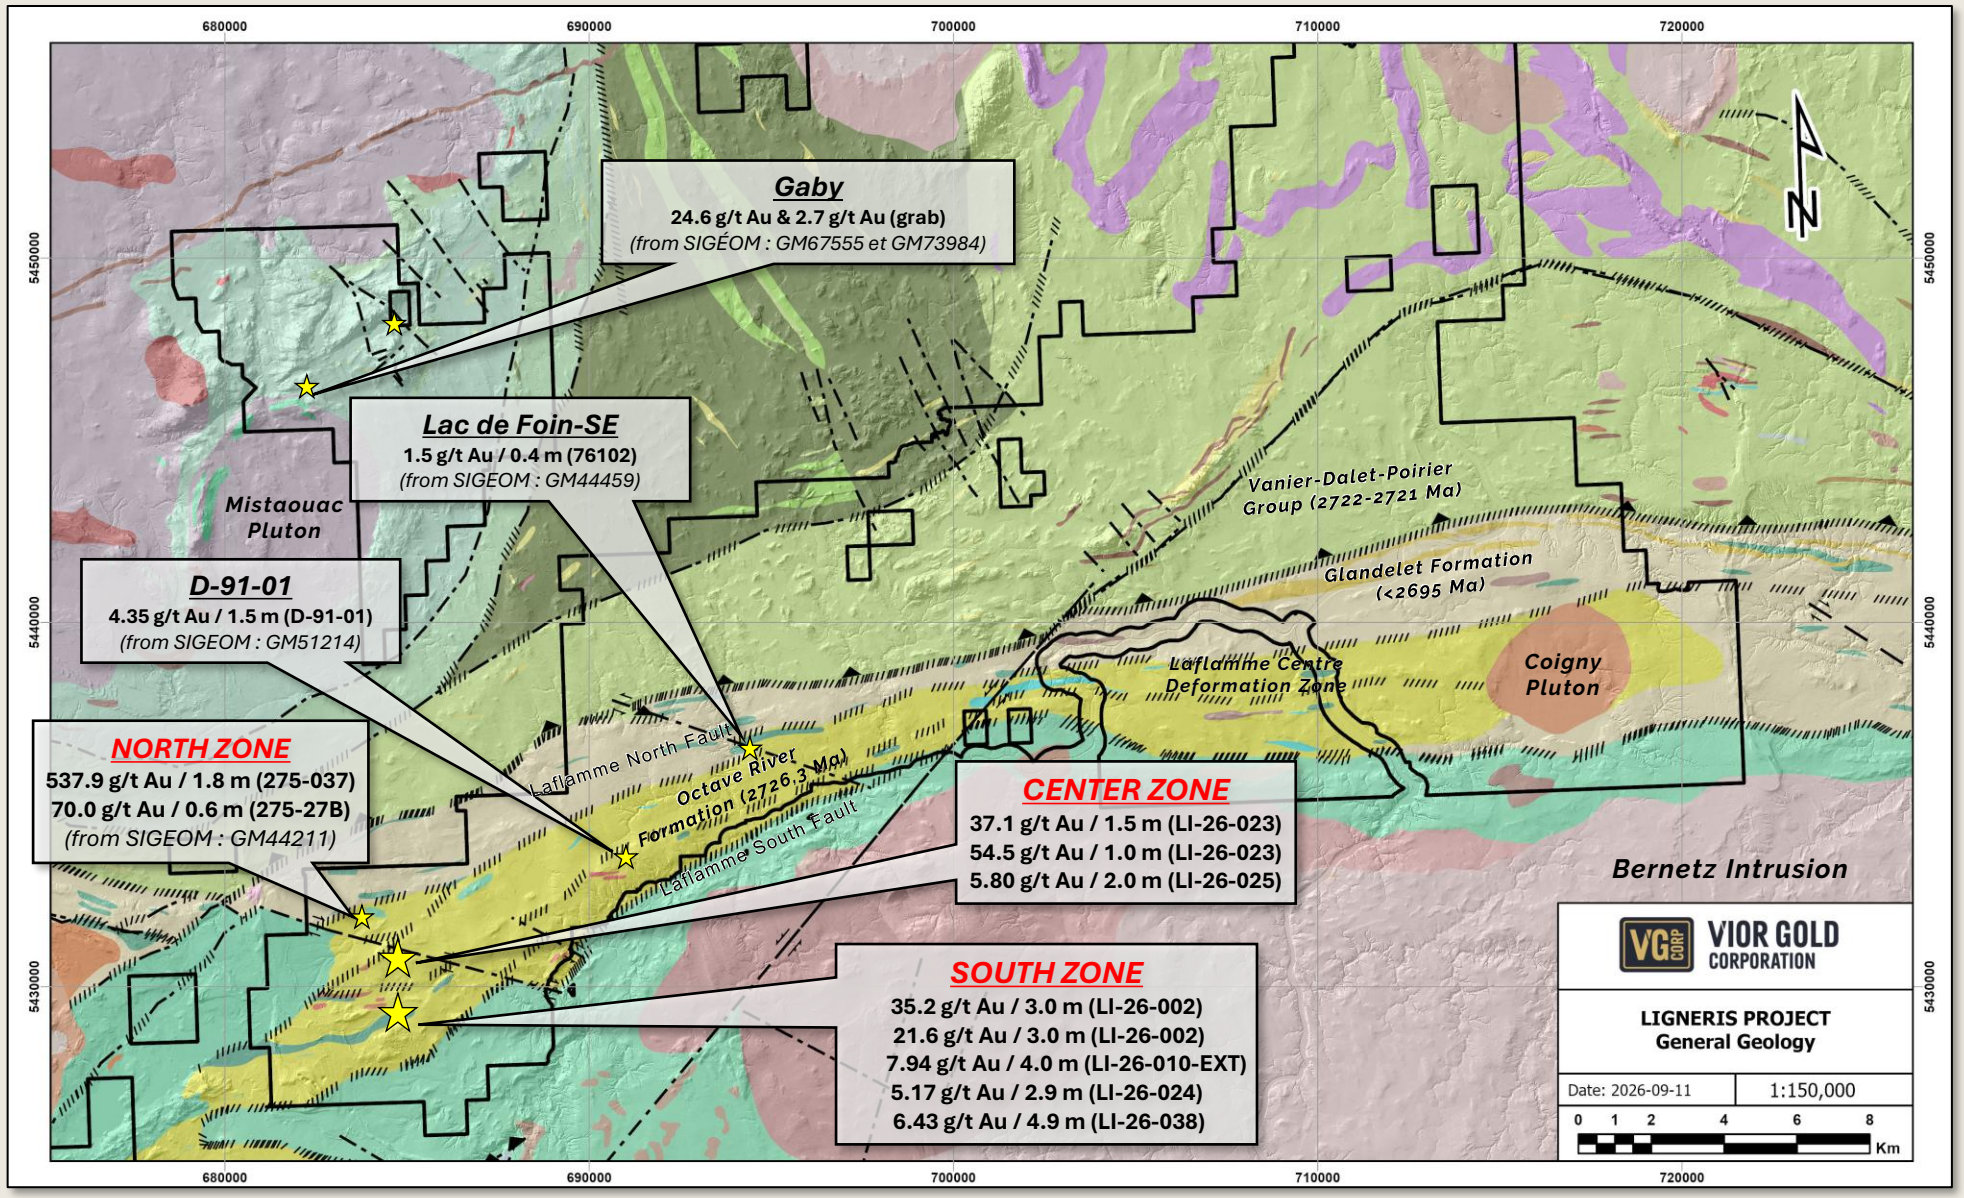

Ranked by 2025 output. Each label is one ownership turn: Walked | Bankruptcy | Forced sale | Sold early | Sold out | Sat stagnant

Rank and owners to date	Who let go, when, and why	Owner today and 2025 figures
1 Nevada Gold Mines USA ●●●●●● 6 owners	Sat stagnant **1963–75** Atlas drilled 17 holes, then no recorded work for 12 years Sold early **1986** Western States hit 391 ft of deep ore, sold 2 months later Sold early **1986** Barrick paid $62M for ~630K oz; the market said it overpaid	BARRICK Newmont Barrick 61.5% / Newmont 38.5% 2025 oz: 2,595K · Revenue: $8.9B · Value: ~$53B
2 Detour Lake Canada ●●●●●●●● 8 owners	Walked **1999** Placer closed it after exploration failed to add reserves Sold early **1999** Placer sold the surrounding ground to Pelangio for $1M Sat stagnant **1999–2007** Mine site in reclamation while juniors drilled next door Walked **2007** Goldcorp handed it over with a $6.5M closure bond	AGNICO EAGLE 2025 oz: 693K · Revenue: $2.4B · Value: ~$18B
3 Canadian Malartic Canada ●●●●●●●●●●● 11 owners	Walked **1929** Malartic Gold Mines quit on low grades and gold price Sat stagnant **1965–74** Closed when deep drilling found no more high grade Walked **2003** Barrick handed it off along with its cleanup liabilities Bankruptcy **2004** McWatters went under; Osisko bought it from the trustee	AGNICO EAGLE 2025 oz: 643K · Revenue: $2.2B · Value: ~$17B
4 Pueblo Viejo Dominican Rep. ●●●●●● 6 owners	Forced sale **1979** State bought Rosario out for ~$35M; sulfide ore unsolved Sat stagnant **1999–2001** Oxides gone, mining stopped; relaunch tender drew 2 bids	BARRICK Newmont Barrick 60% / Newmont 40% 2025 oz: 633K · Revenue: $2.2B · Value: ~$13B
5 Paracatu Brazil ●●●●●● 6+ owners	Sold early **1984** Billiton sold out to Rio Tinto before first production Sold out **2003** Newmont sold its 24.5% stake to TVX Sold out **2004** Rio Tinto sold its 51% to Kinross for $260M	KINROSS 2025 oz: 587K · Revenue: $2.0B · Value: ~$8B
6 Yanacocha Peru ●●●●● 5+ owners	Forced sale **1998** BRGM lost in Peru's Supreme Court, had to sell its 24.7% Sold out **2022** Sumitomo used its put option on its 5% Sold out **2022** Buenaventura sold its 43.65% to Newmont for $300M	Newmont 2025 oz: 515K · Revenue: $1.8B · Value: ~$11B
7 Salares Norte Chile ●●● 3+ owners	Sold early **2012+** Concession owners optioned ground in and kept 2% royalties Sold early **2019** One of those royalties sold to Franco-Nevada for $32M	 2025 oz: 505K · Revenue: $1.7B · Value: ~$8B
8 Fruta del Norte Ecuador ●●●● 4 owners	Sold early **2008** Aurelian sold to Kinross during Ecuador's exploration freeze Walked **2013** Kinross quit over windfall taxes, booked a $720M loss Sat stagnant **2013–14** Idle about 18 months until Lundin paid US$240M	LUNDIN GOLD 2025 oz: 498K · Revenue: $1.7B · Value: ~$15B
9 Meadowbank Canada ●●●● 4+ owners	Walked **1992** Agnico and Hecla dropped it after 65 holes and 200K oz Sat stagnant **1992–95** Little drilling until Cumberland restarted Sold early **1993** Oil company Gulf Canada sold Asamera's 60% for $450K Sold early **1997** Comaplex sold its 40%; Agnico paid C$710M in 2007	AGNICO EAGLE 2025 oz: 493K · Revenue: $1.7B · Value: ~$13B
10 Peñasquito Mexico ●●●●● 5+ owners	Sold early **1998** Kennecott wanted copper, sold after 71 holes for ~$5M Walked **2001** Hochschild drilled 11 holes, wanted no bulk-tonnage mine Sold out **2006** Western Silver sold to Glamis for $1.2B	Newmont 2025 oz: 415K · Revenue: $1.4B · Value: ~$9B

Owners: every documented holder of claims or equity, original stakers included. + means earlier holders not yet identified. Nevada Gold Mines owners traced through Goldstrike.
Revenue: 2025 gold oz × $3,432/oz average LBMA price, by-products excluded. Value: rough market-implied estimate, owner's Oct 2026 market cap per ounce of 2025 output × mine output (Fruta del Norte = Lundin Gold market cap); ignores costs, mine life and debt. Sources: S&P Global via MINING.COM 2025 ranking, Newmont, IAMGOLD and company filings, NI 43-101 reports, The Northern Miner archives.

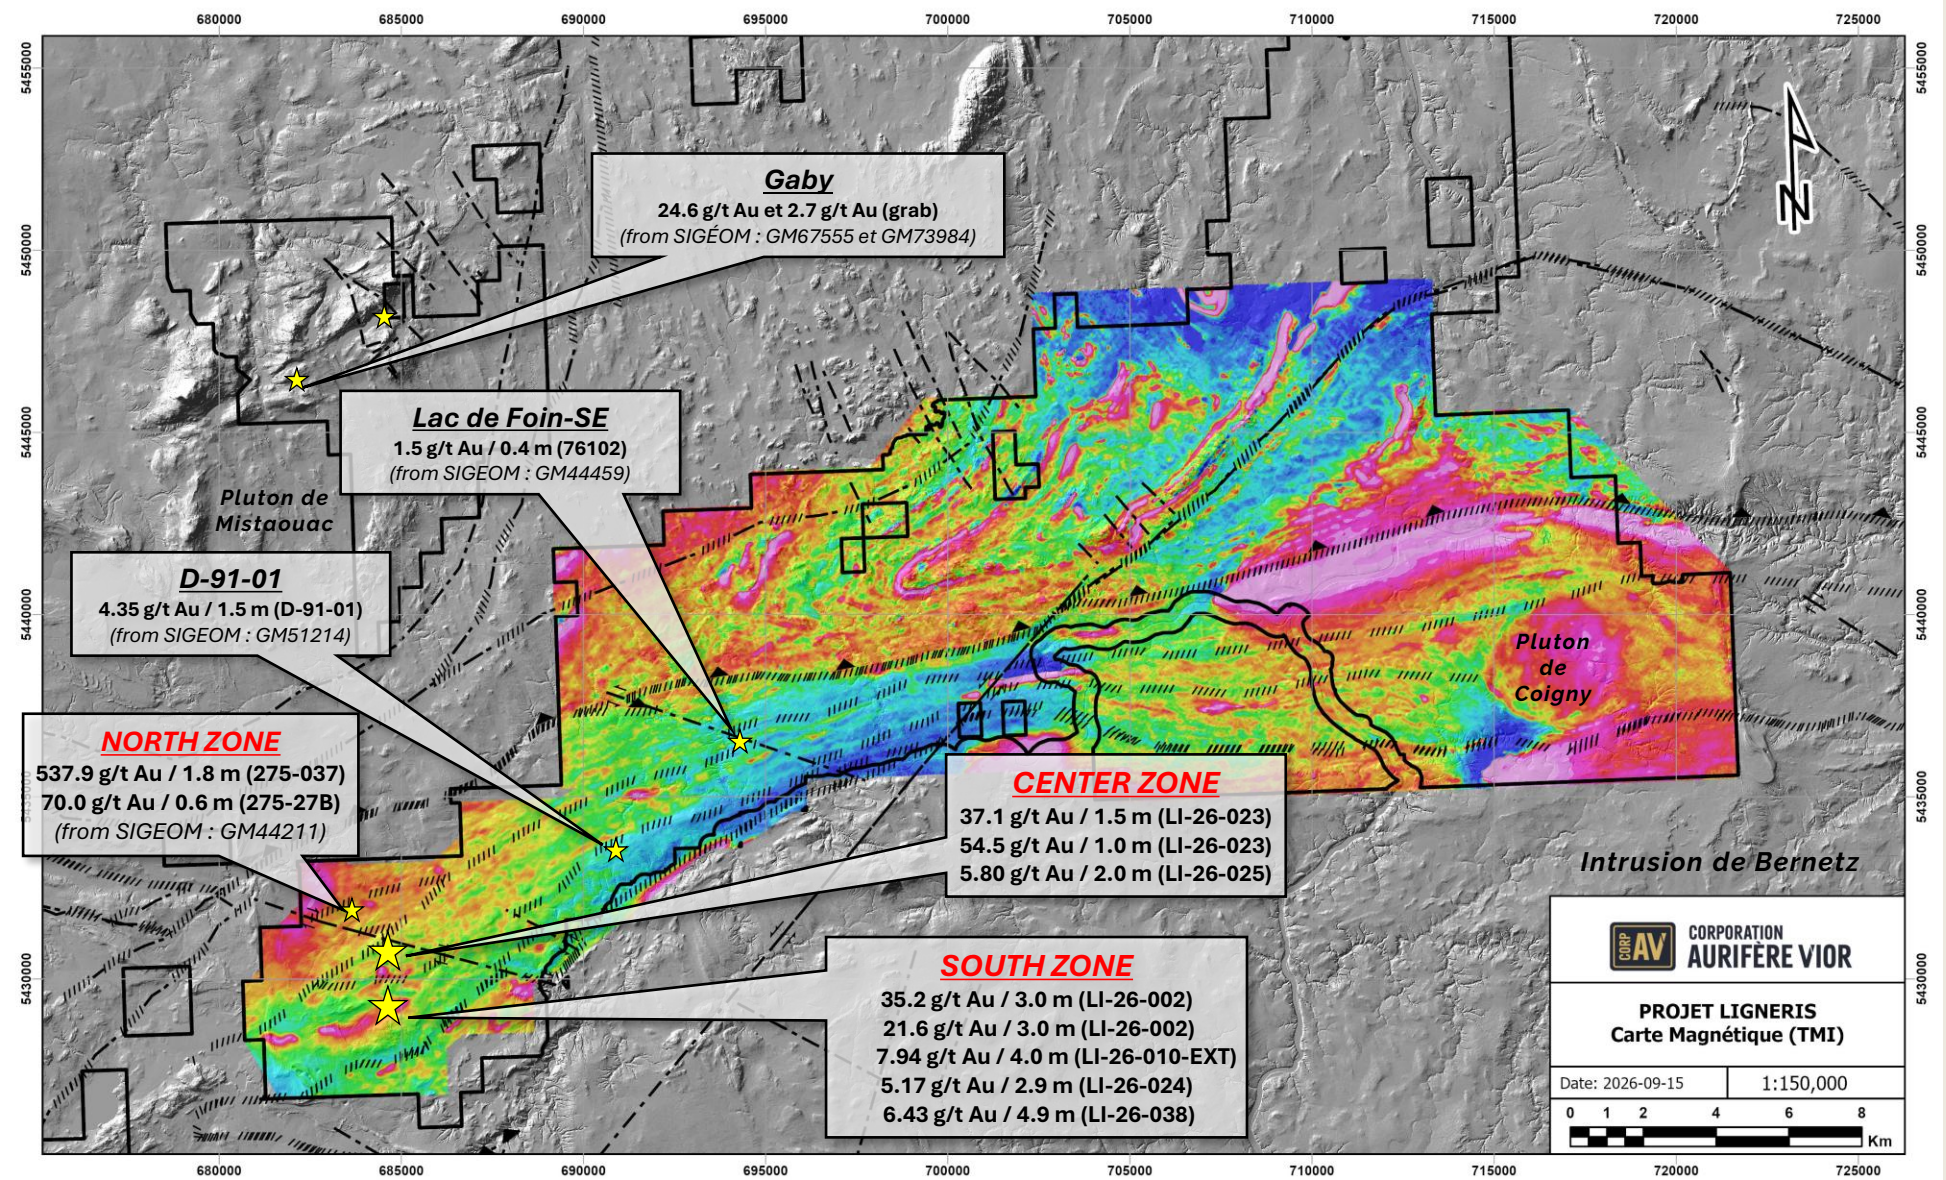

@drcopper

LIGNERIS PROJECT: DISTRICT SCALE OPPORTUNITY

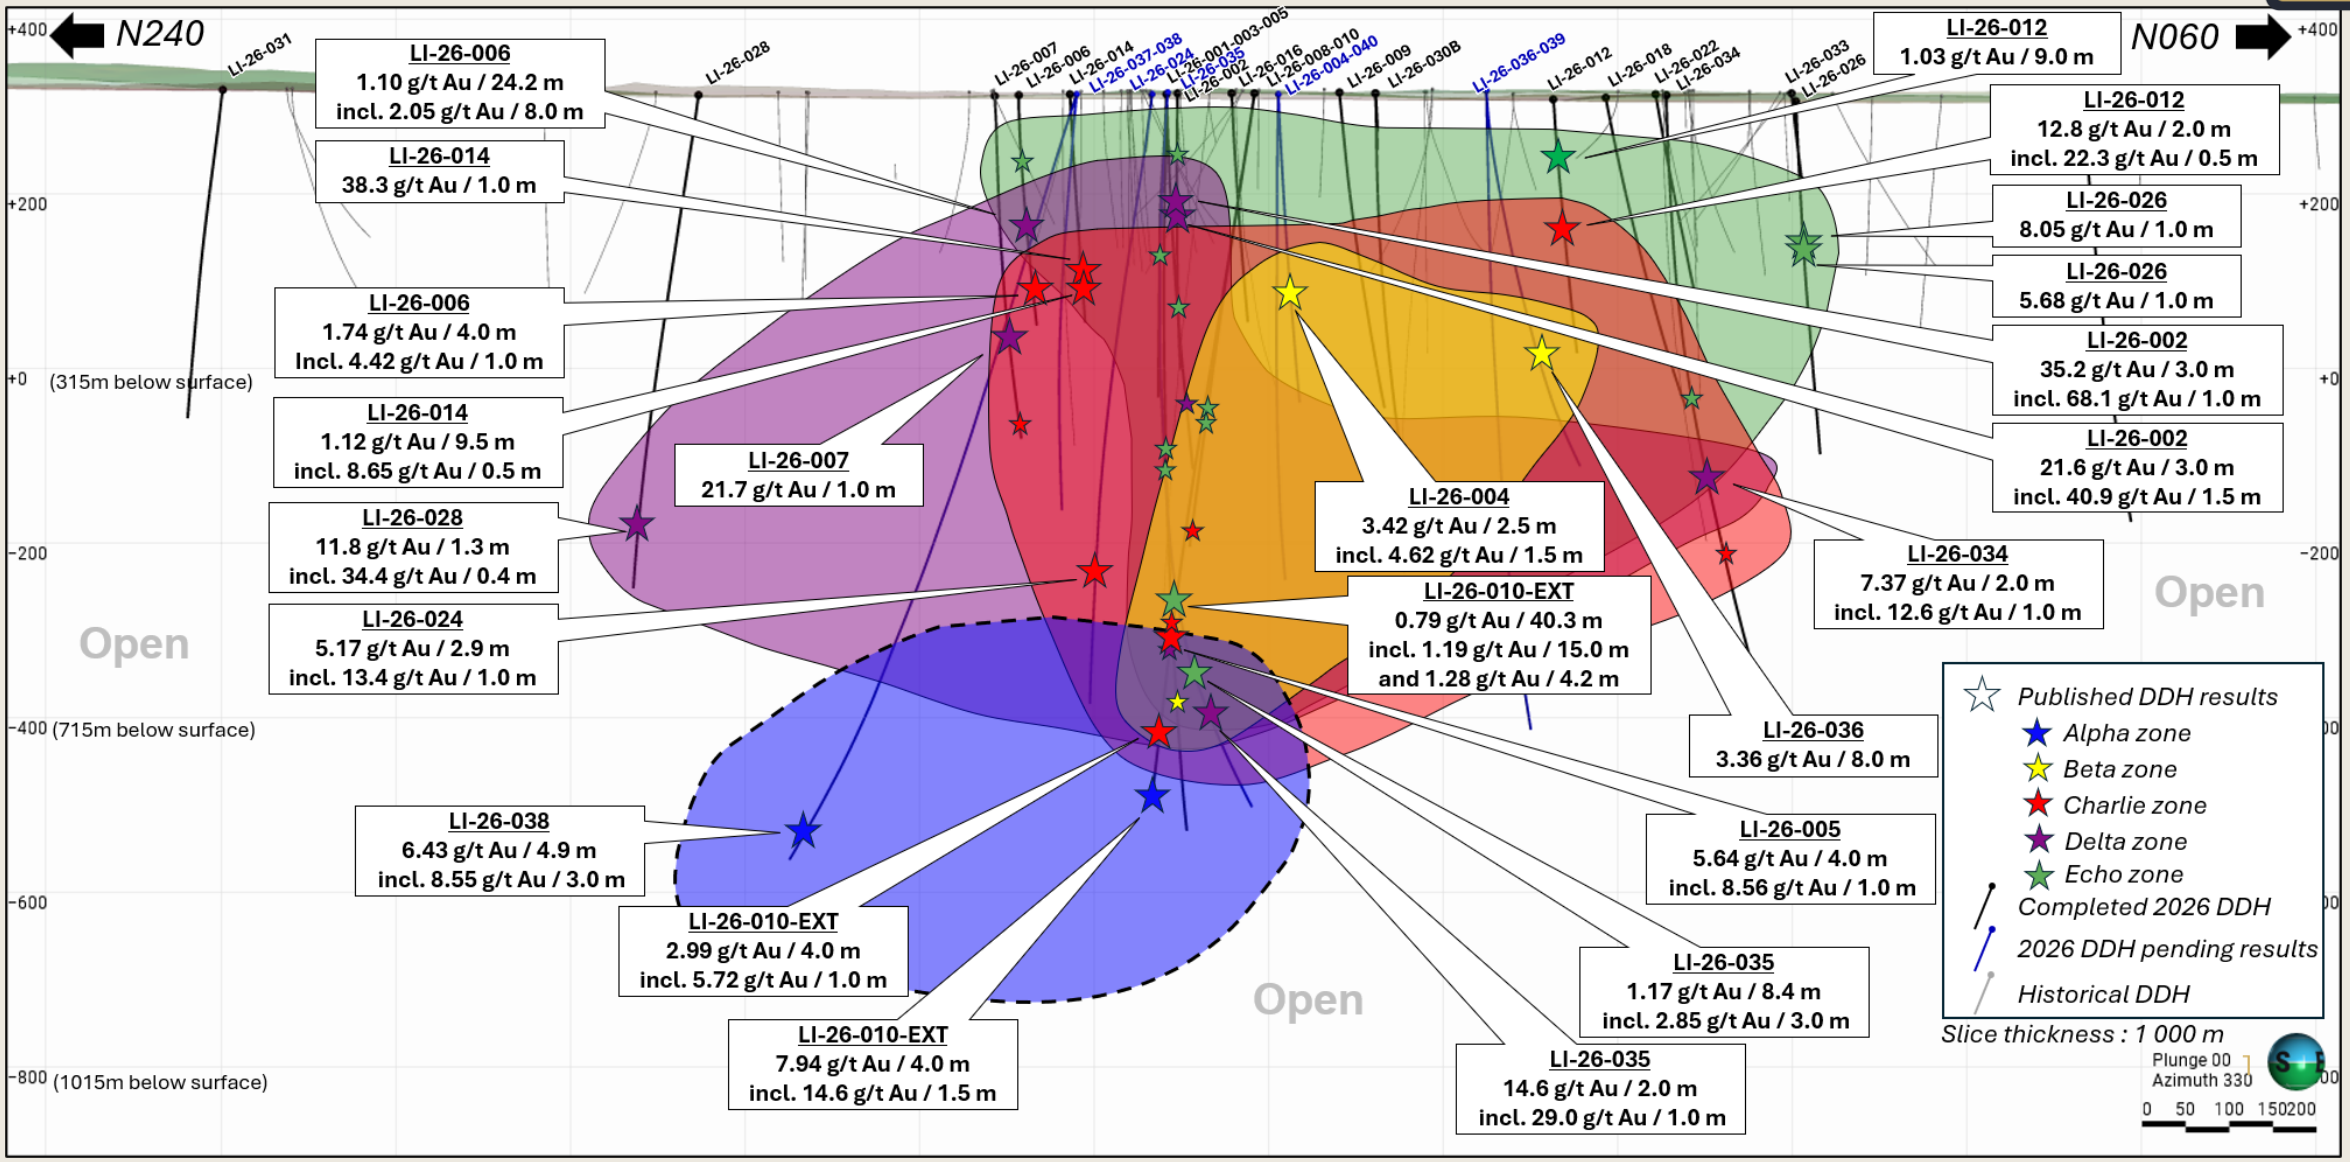

- >45 km along Octave River felsic complex (2726.3 Ma).
- Very little work carried out outside known areas.
- Contemporary with the formation of Normetal (2725 +/-2 Ma), 40 km to the west.

LIGNERIS PROJECT: DISTRICT SCALE OPPORTUNITY

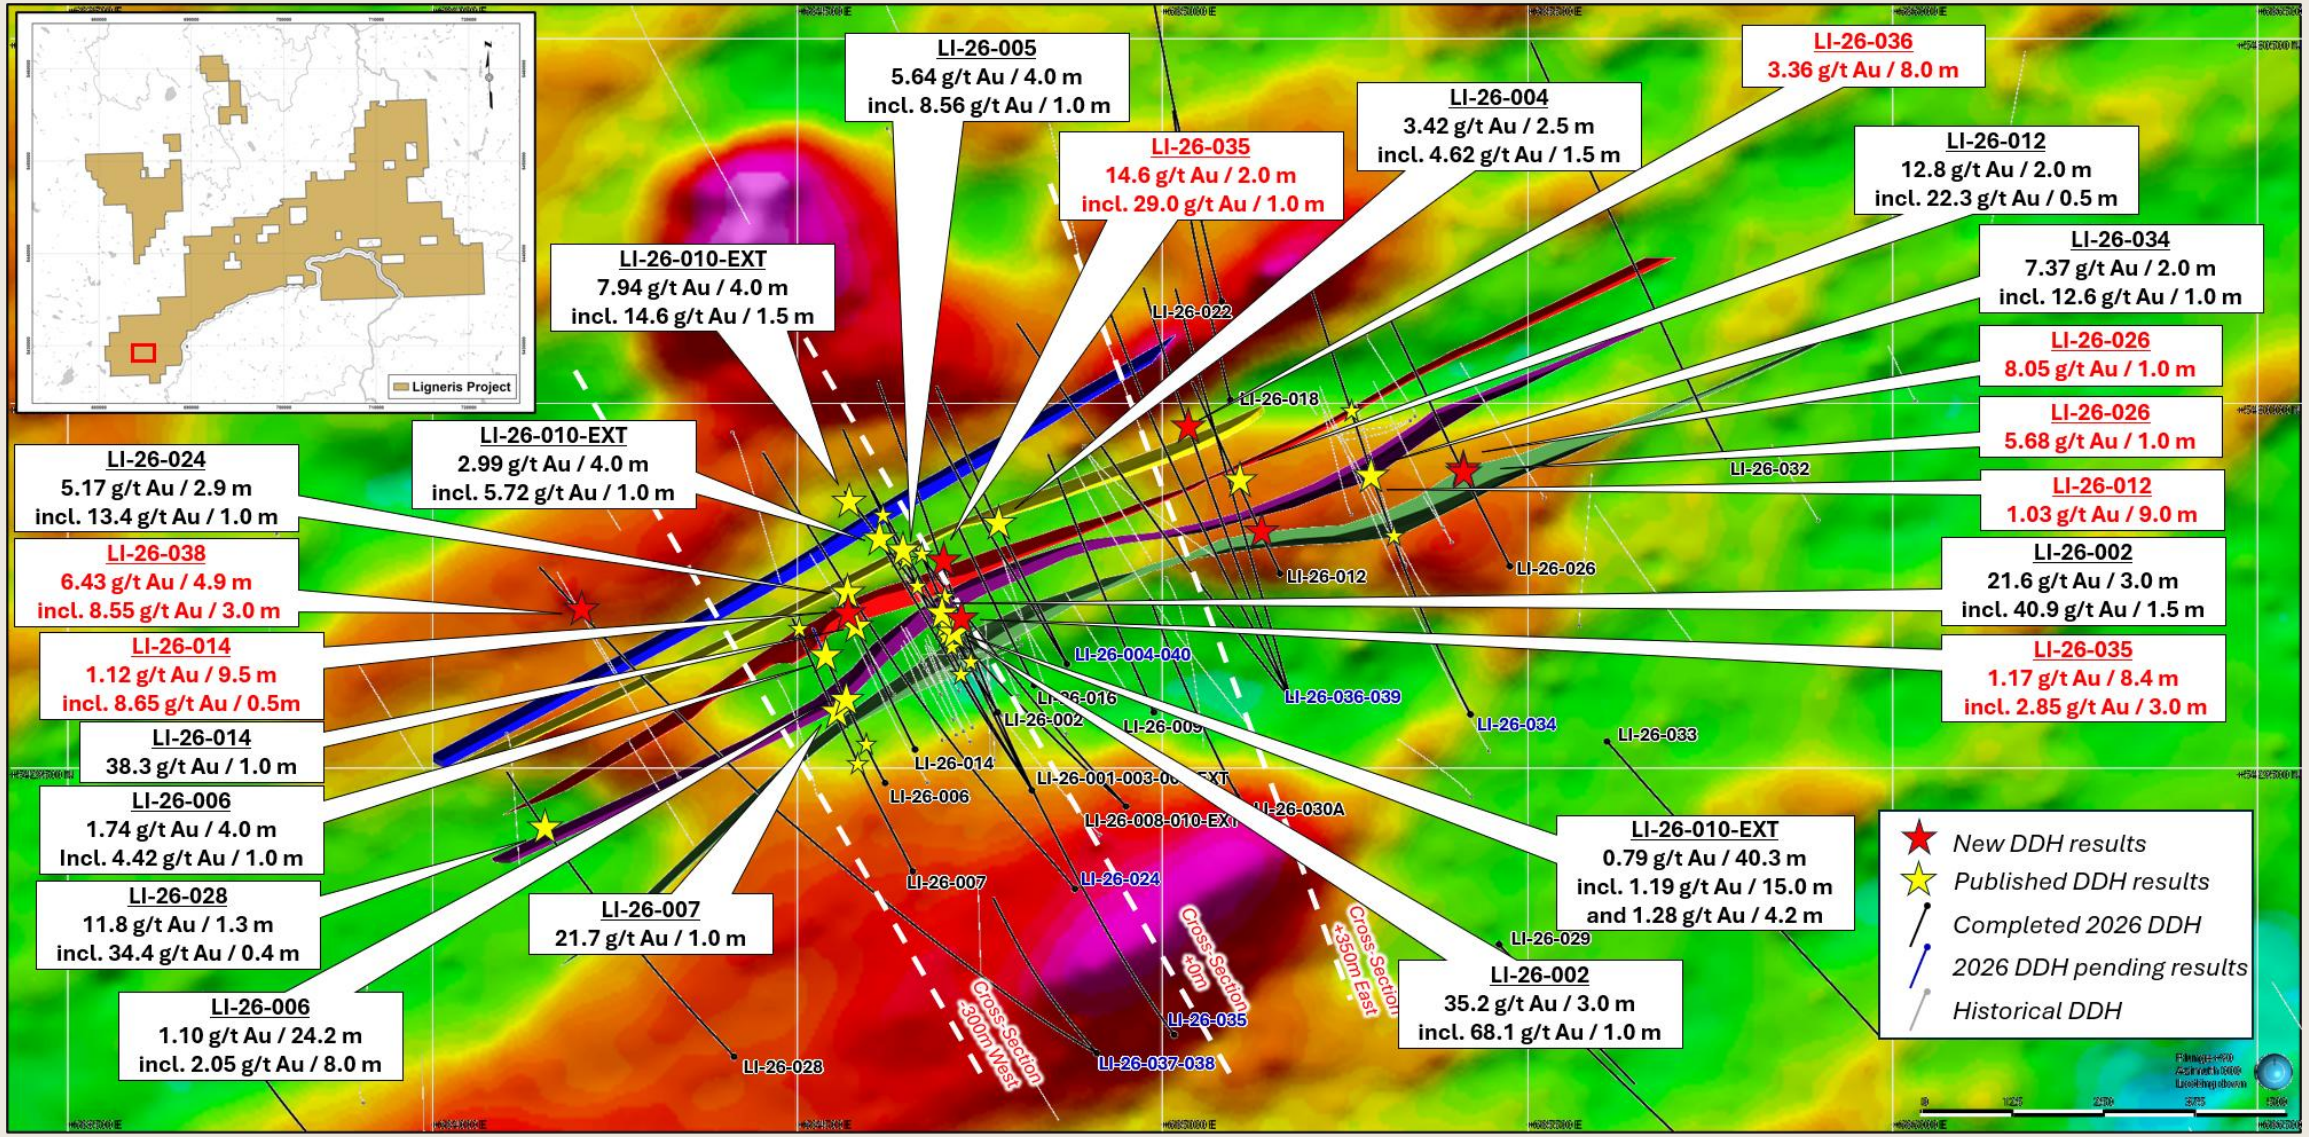

- >45 km along Octave River felsic complex (2726.3 Ma).
- Very little work carried out outside known areas.
- Contemporary with the formation of Normetal (2725 +/-2 Ma), 40 km to the west.

Press Release published on September 1st , 2026, "Vior Gold Corporation Continues to Extend High-Grade Footprint at Ligneris."

LIGNERIS - SOUTH ZONE PLAN VIEW

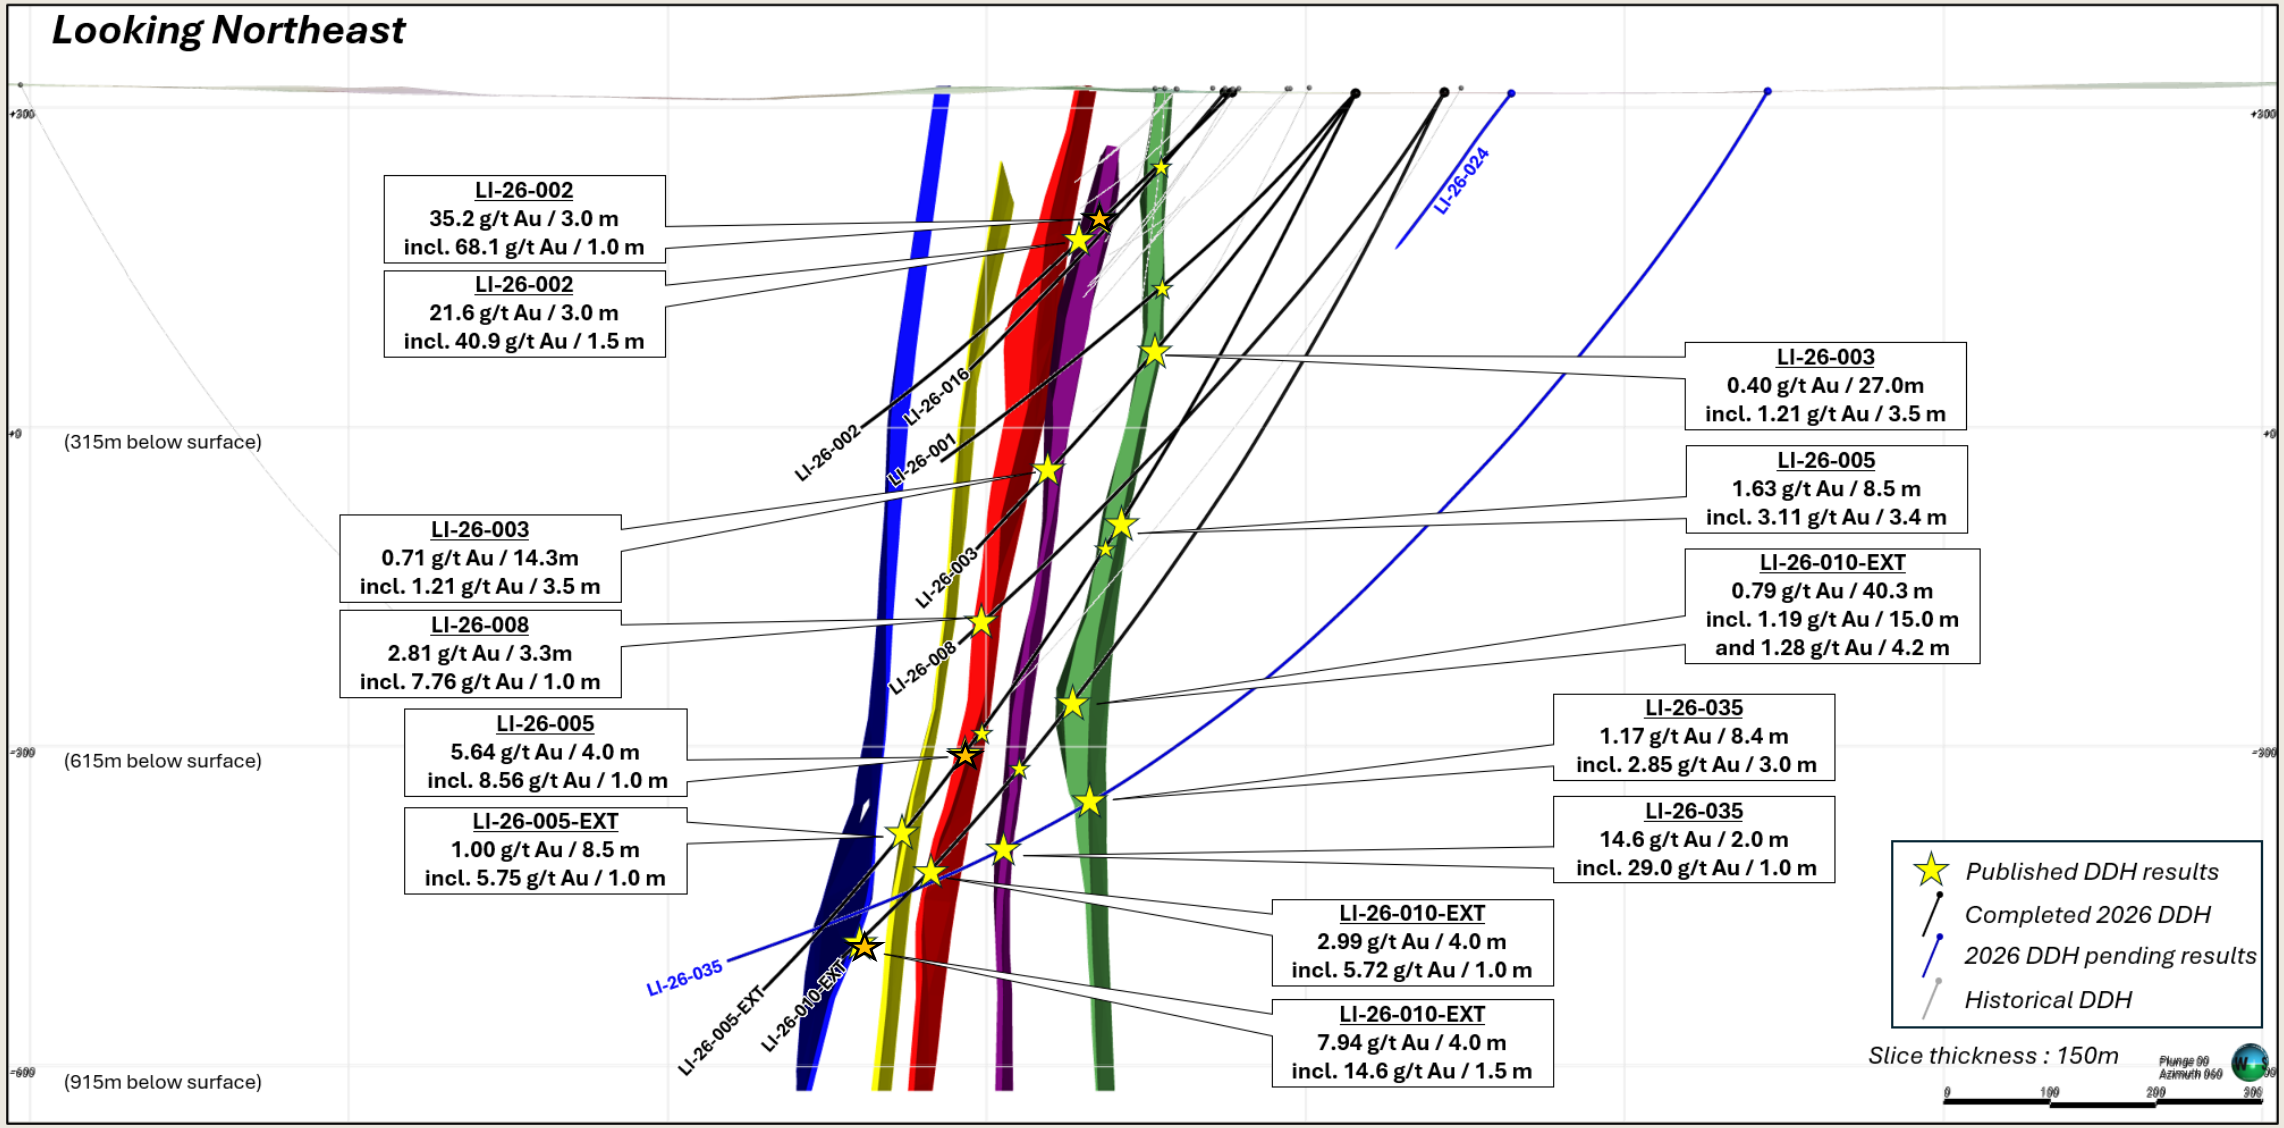

Press Release published on September 1st , 2026, "Vior Gold Corporation Continues to Extend High-Grade Footprint at Ligneris."

- Gold mineralization appears to be associated with NE-SW and N-S structures.
- Centre zone dominated by iron rich carbonate (siderite), chlorite and sericite typical of VMS systems. Excellent exploration vectors.
- South zone dominated by sericite (paragonite) and proximal silica alteration.
- The genetic of gold mineralization is key for local and regional exploration.
- Several structures remain to be tested.

COMPARISON WITH DOYON-BOUSQUET-LARONDE CAMP

Composite longitudinal view (looking north) of the Doyon-Bousquet-LaRonde mining camp. The outlines of zones and lenses include production, reserves, and resources, including some historical, non-NI 43-101 compliant reserves and resources (Modified from Mercier-Langevin et al., 2017).

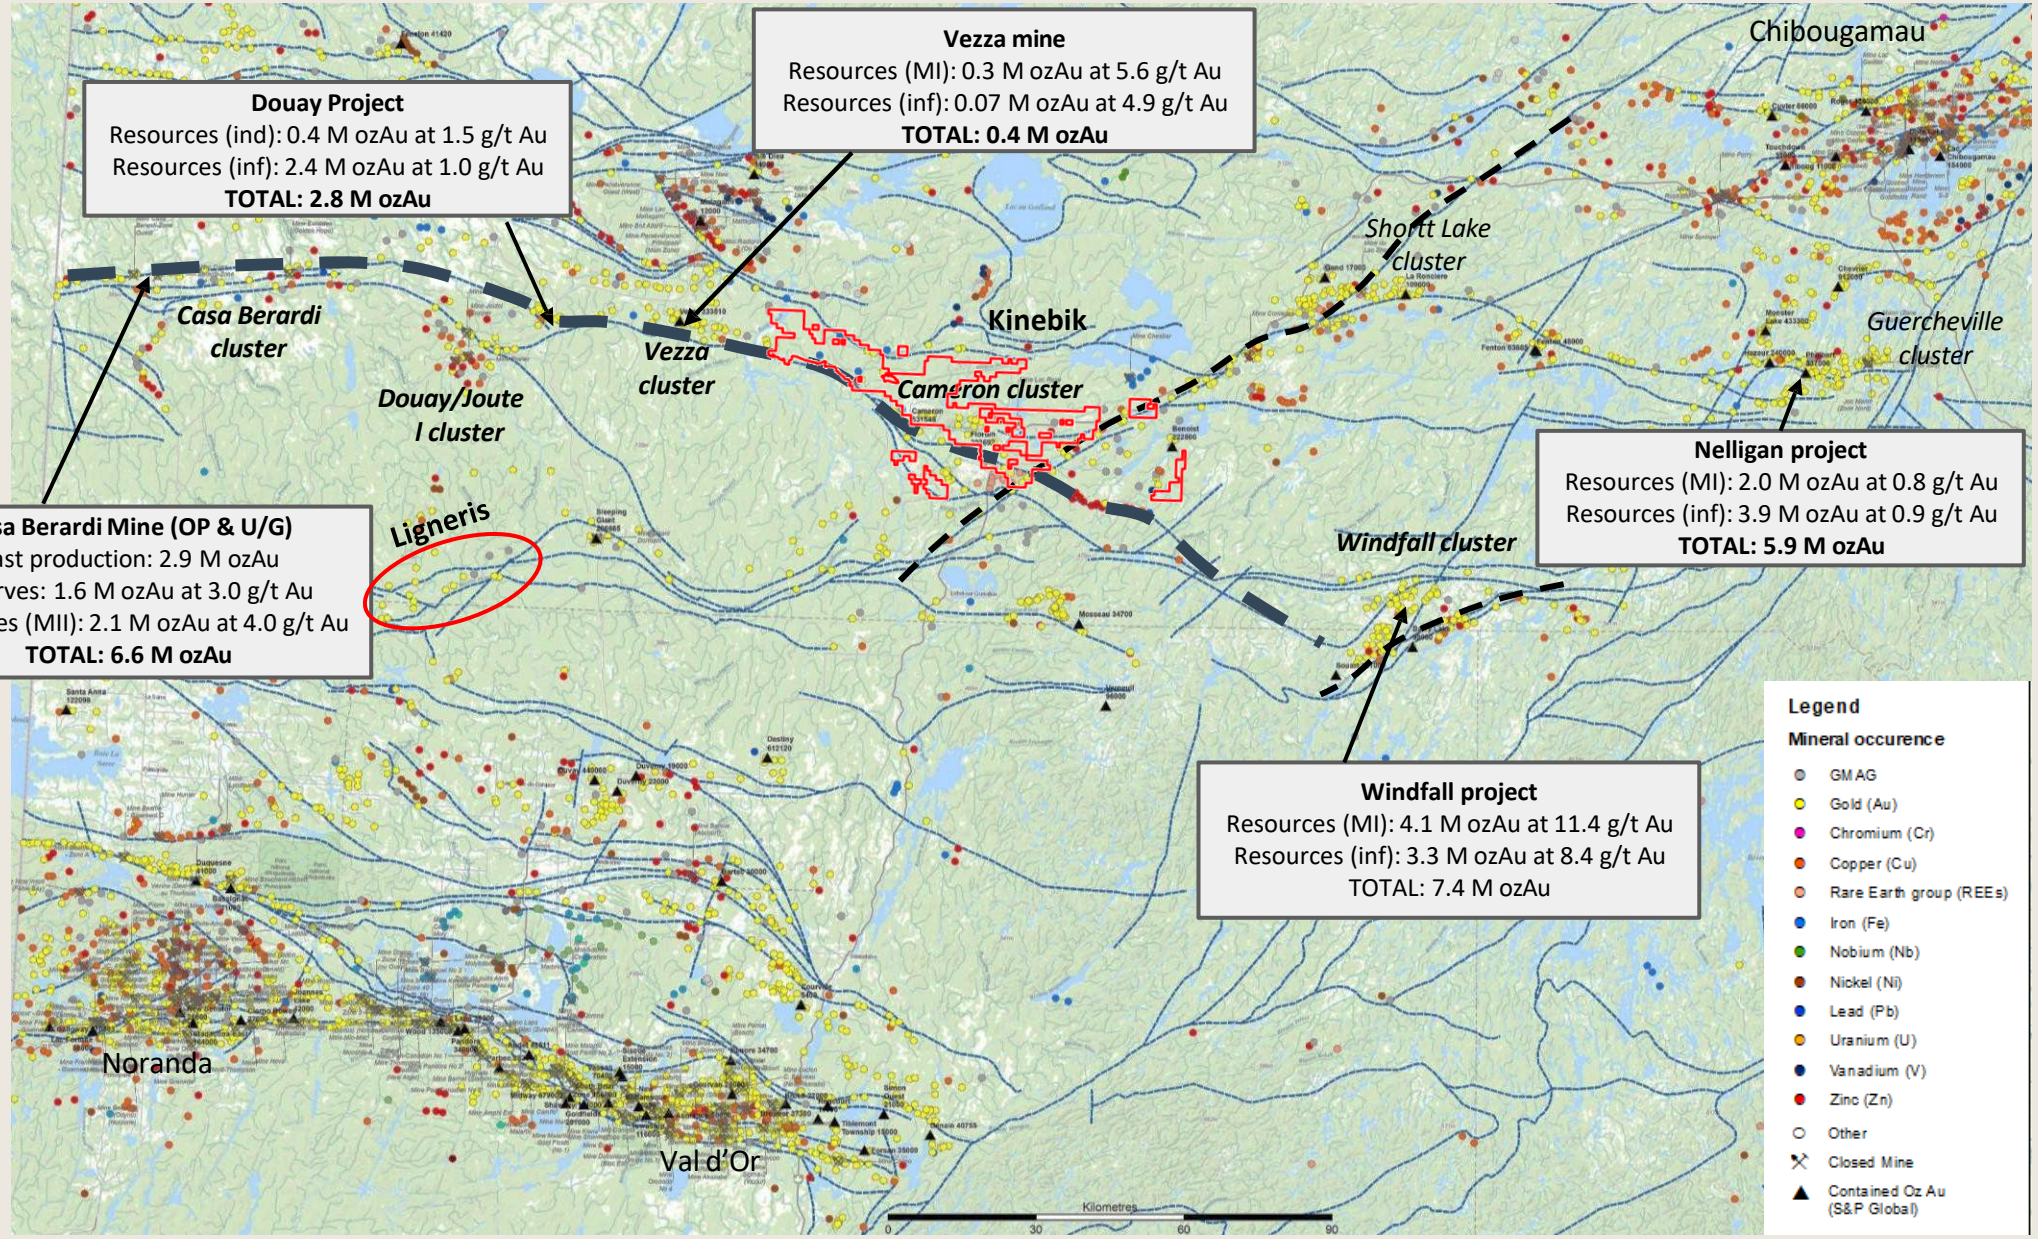

KINEBIK PROJECT

Highlights & Opportunities

- Located 40 km NE of Lebel-sur-Quévillon, Quebec.
- 1,267 claims covering > 737 km^2.
- Excellent location and low-cost exploration.
- Orogenic Au, Gold associated with felsic intrusion, Gold-bearing Iron formation.
- 55 km along the Cameron Break hosting multiple gold deposits.
- Multiple new gold drilling targets and follow-up.
- Ongoing 15,000 m drill program.

KINEBIK - REGIONAL STRUCTURES

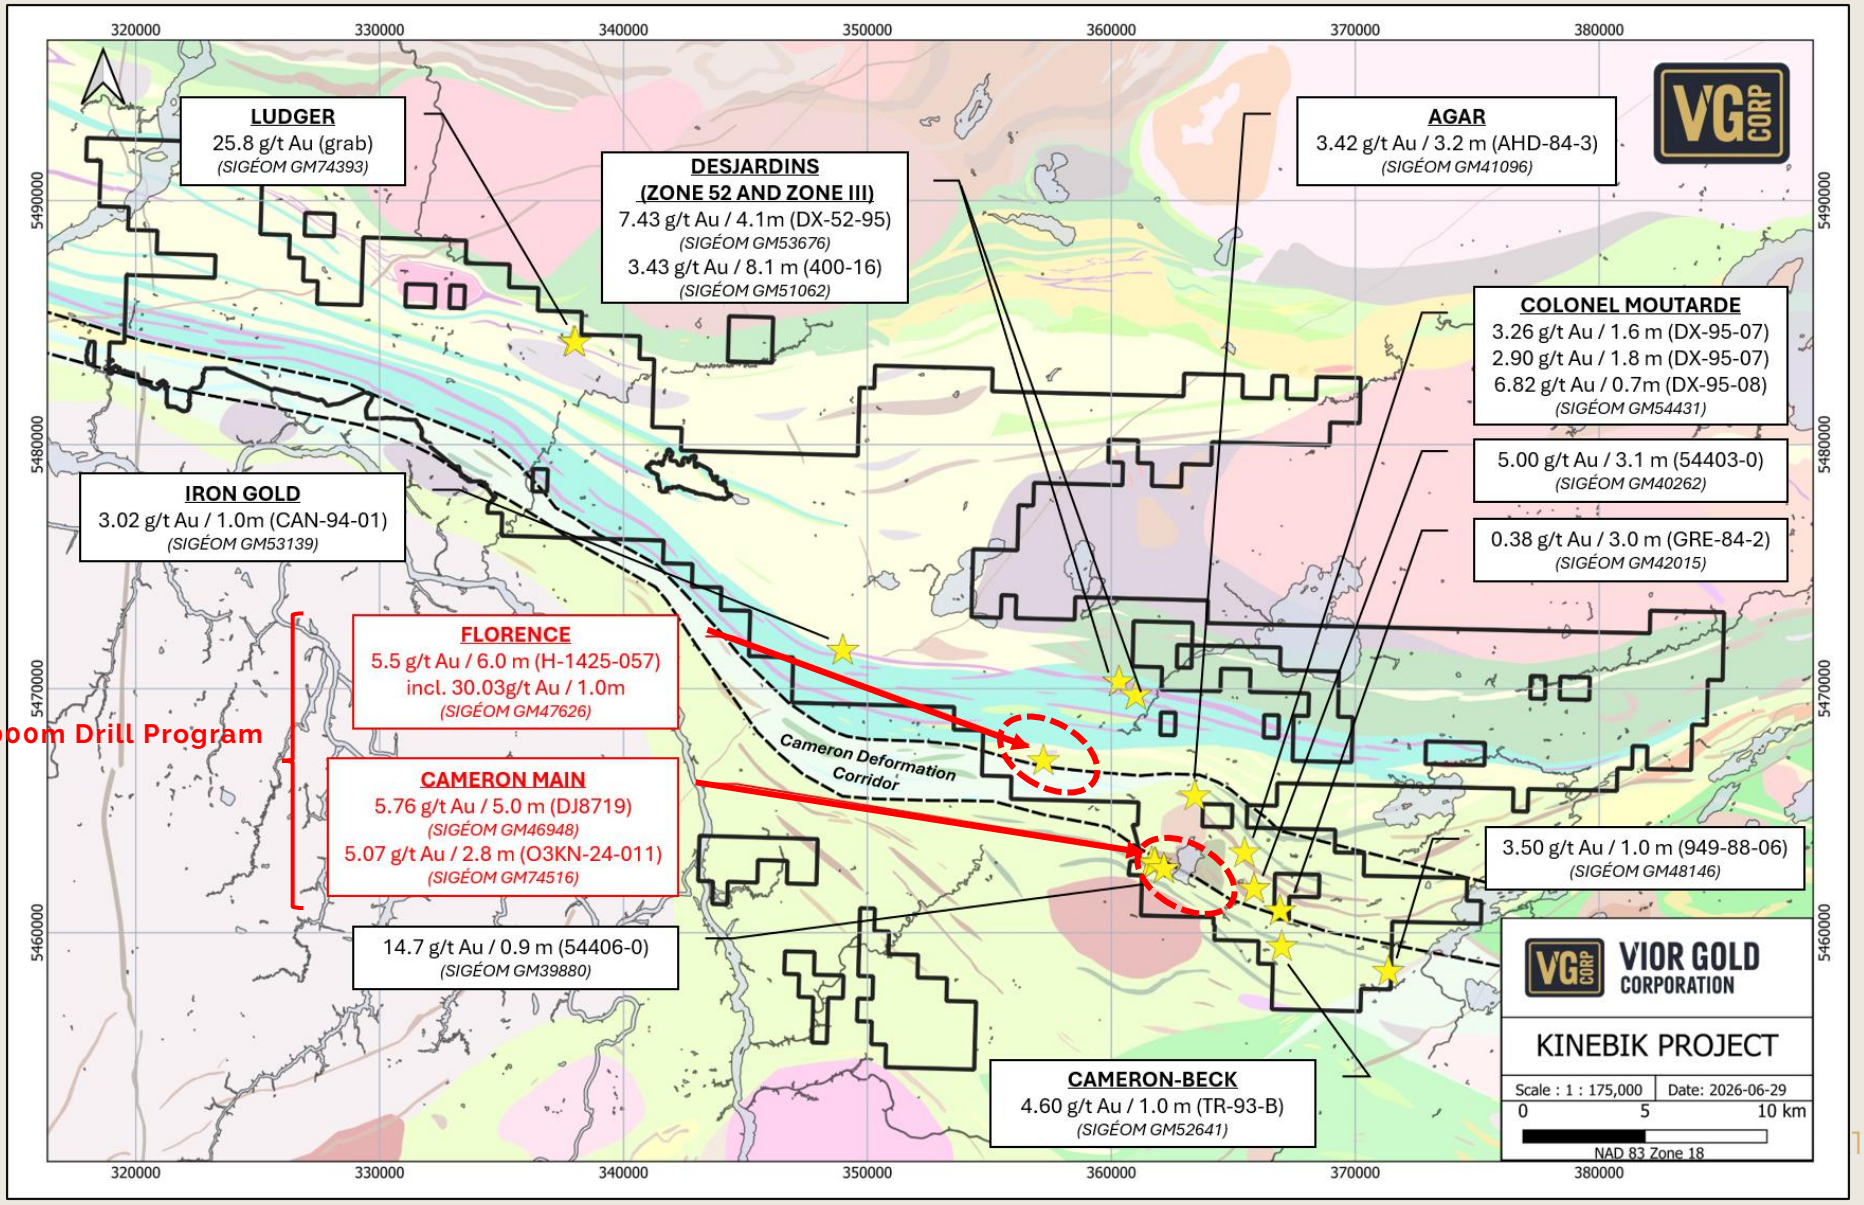

Significant gold deposits in the Abitibi are located within clusters of gold occurrences along the major breaks.

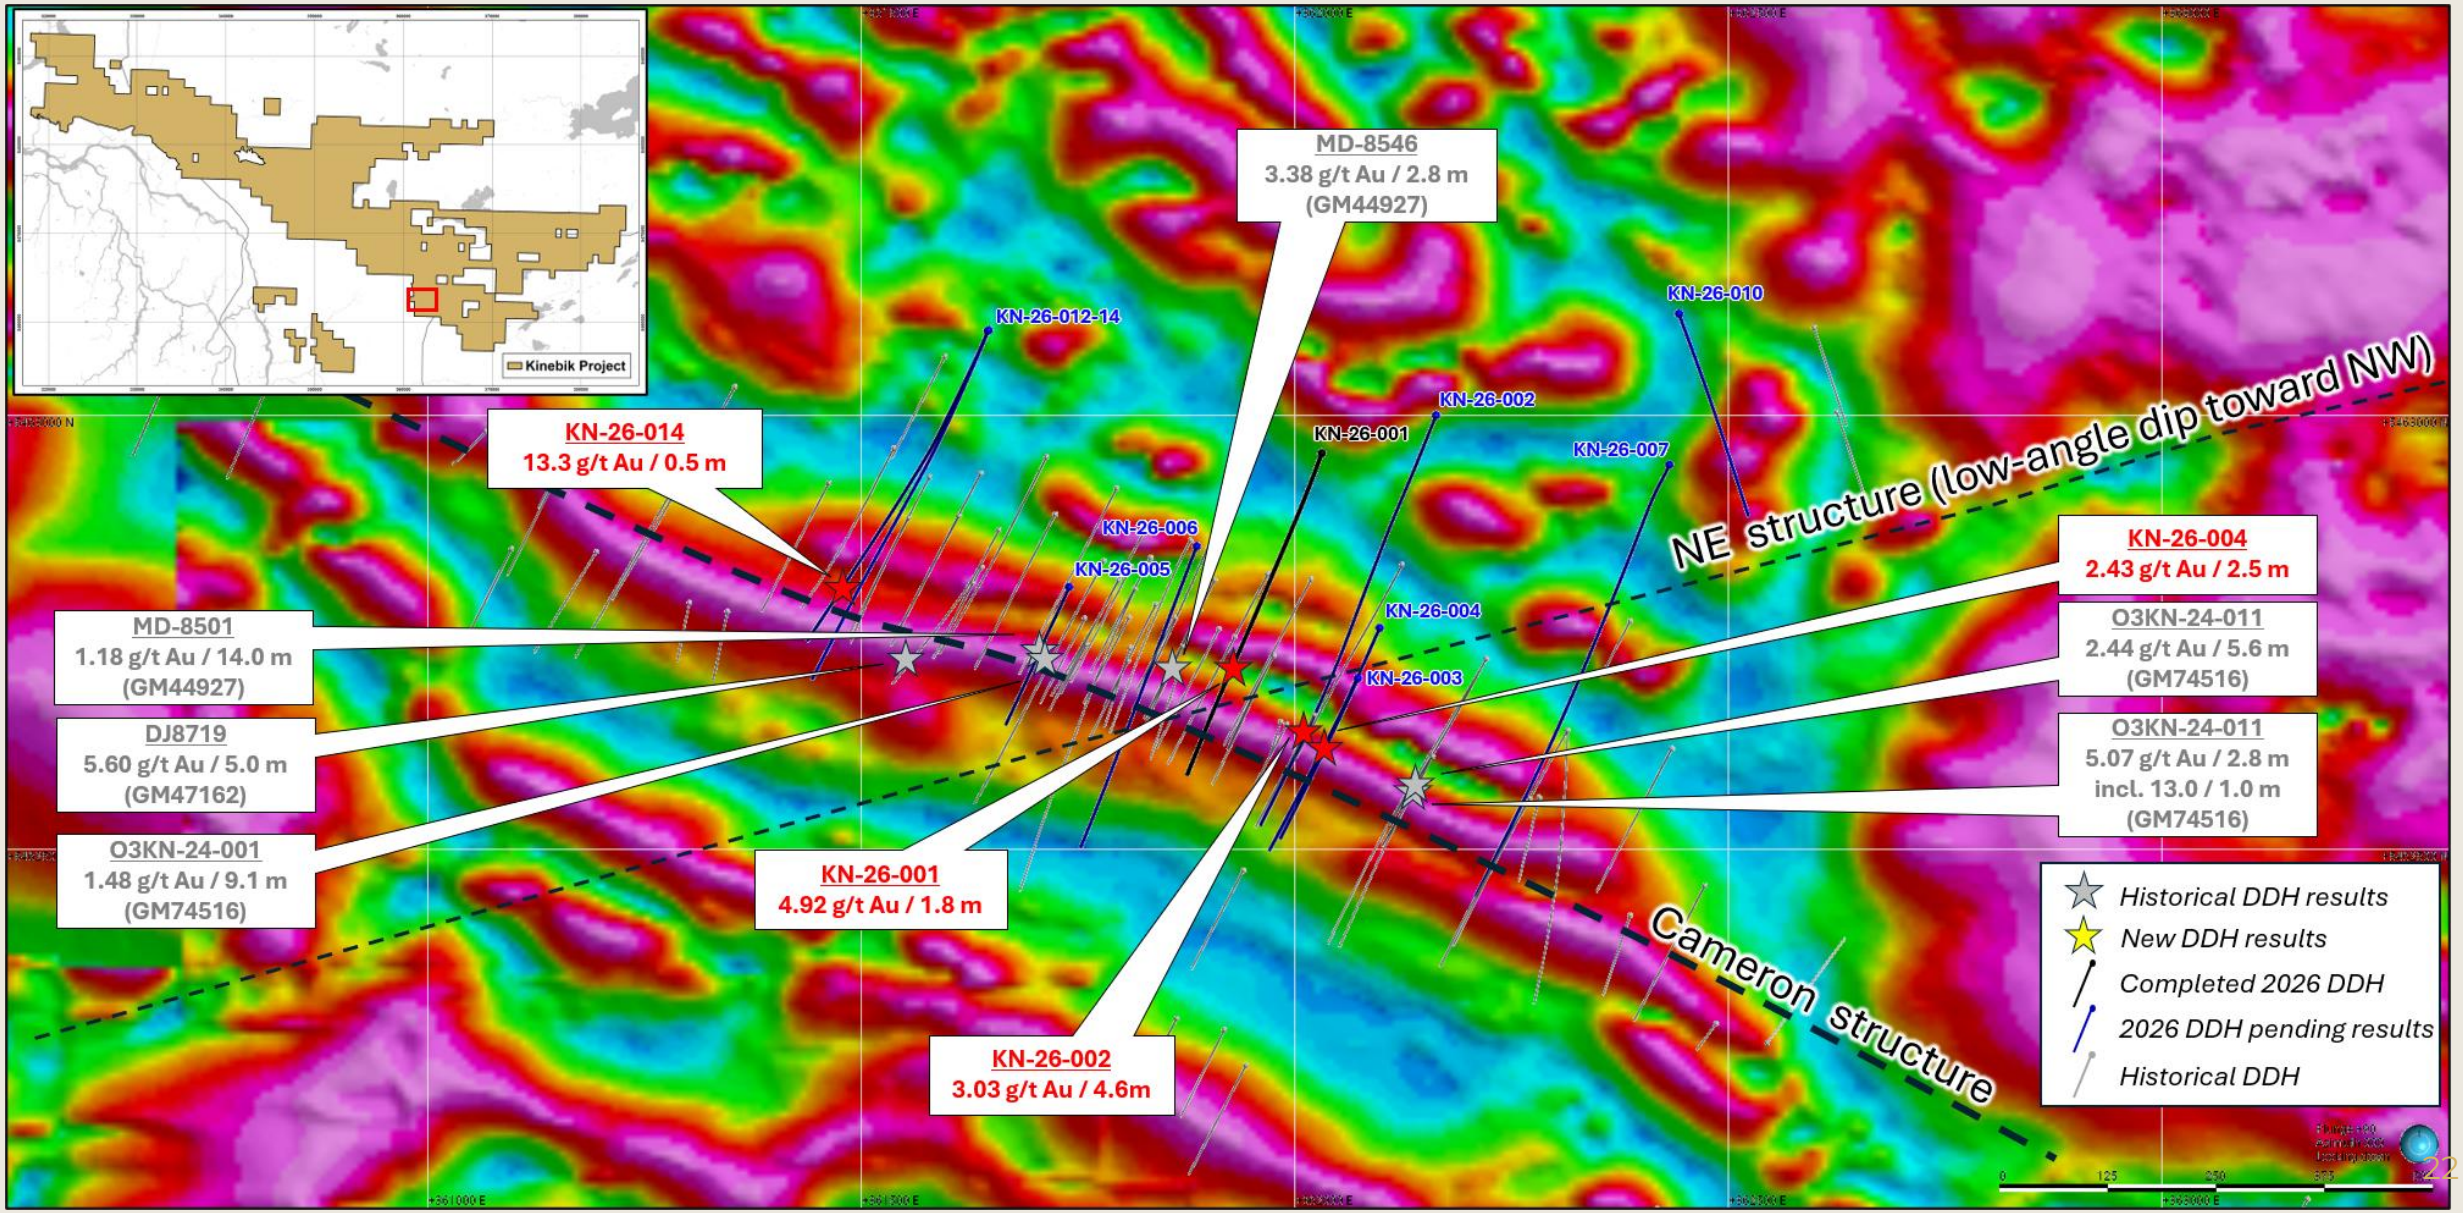

Kinebik property along the Casa Berardi – Cameron Break (CBCB) is based on this concept.

KINEBIK - MINERALIZATION

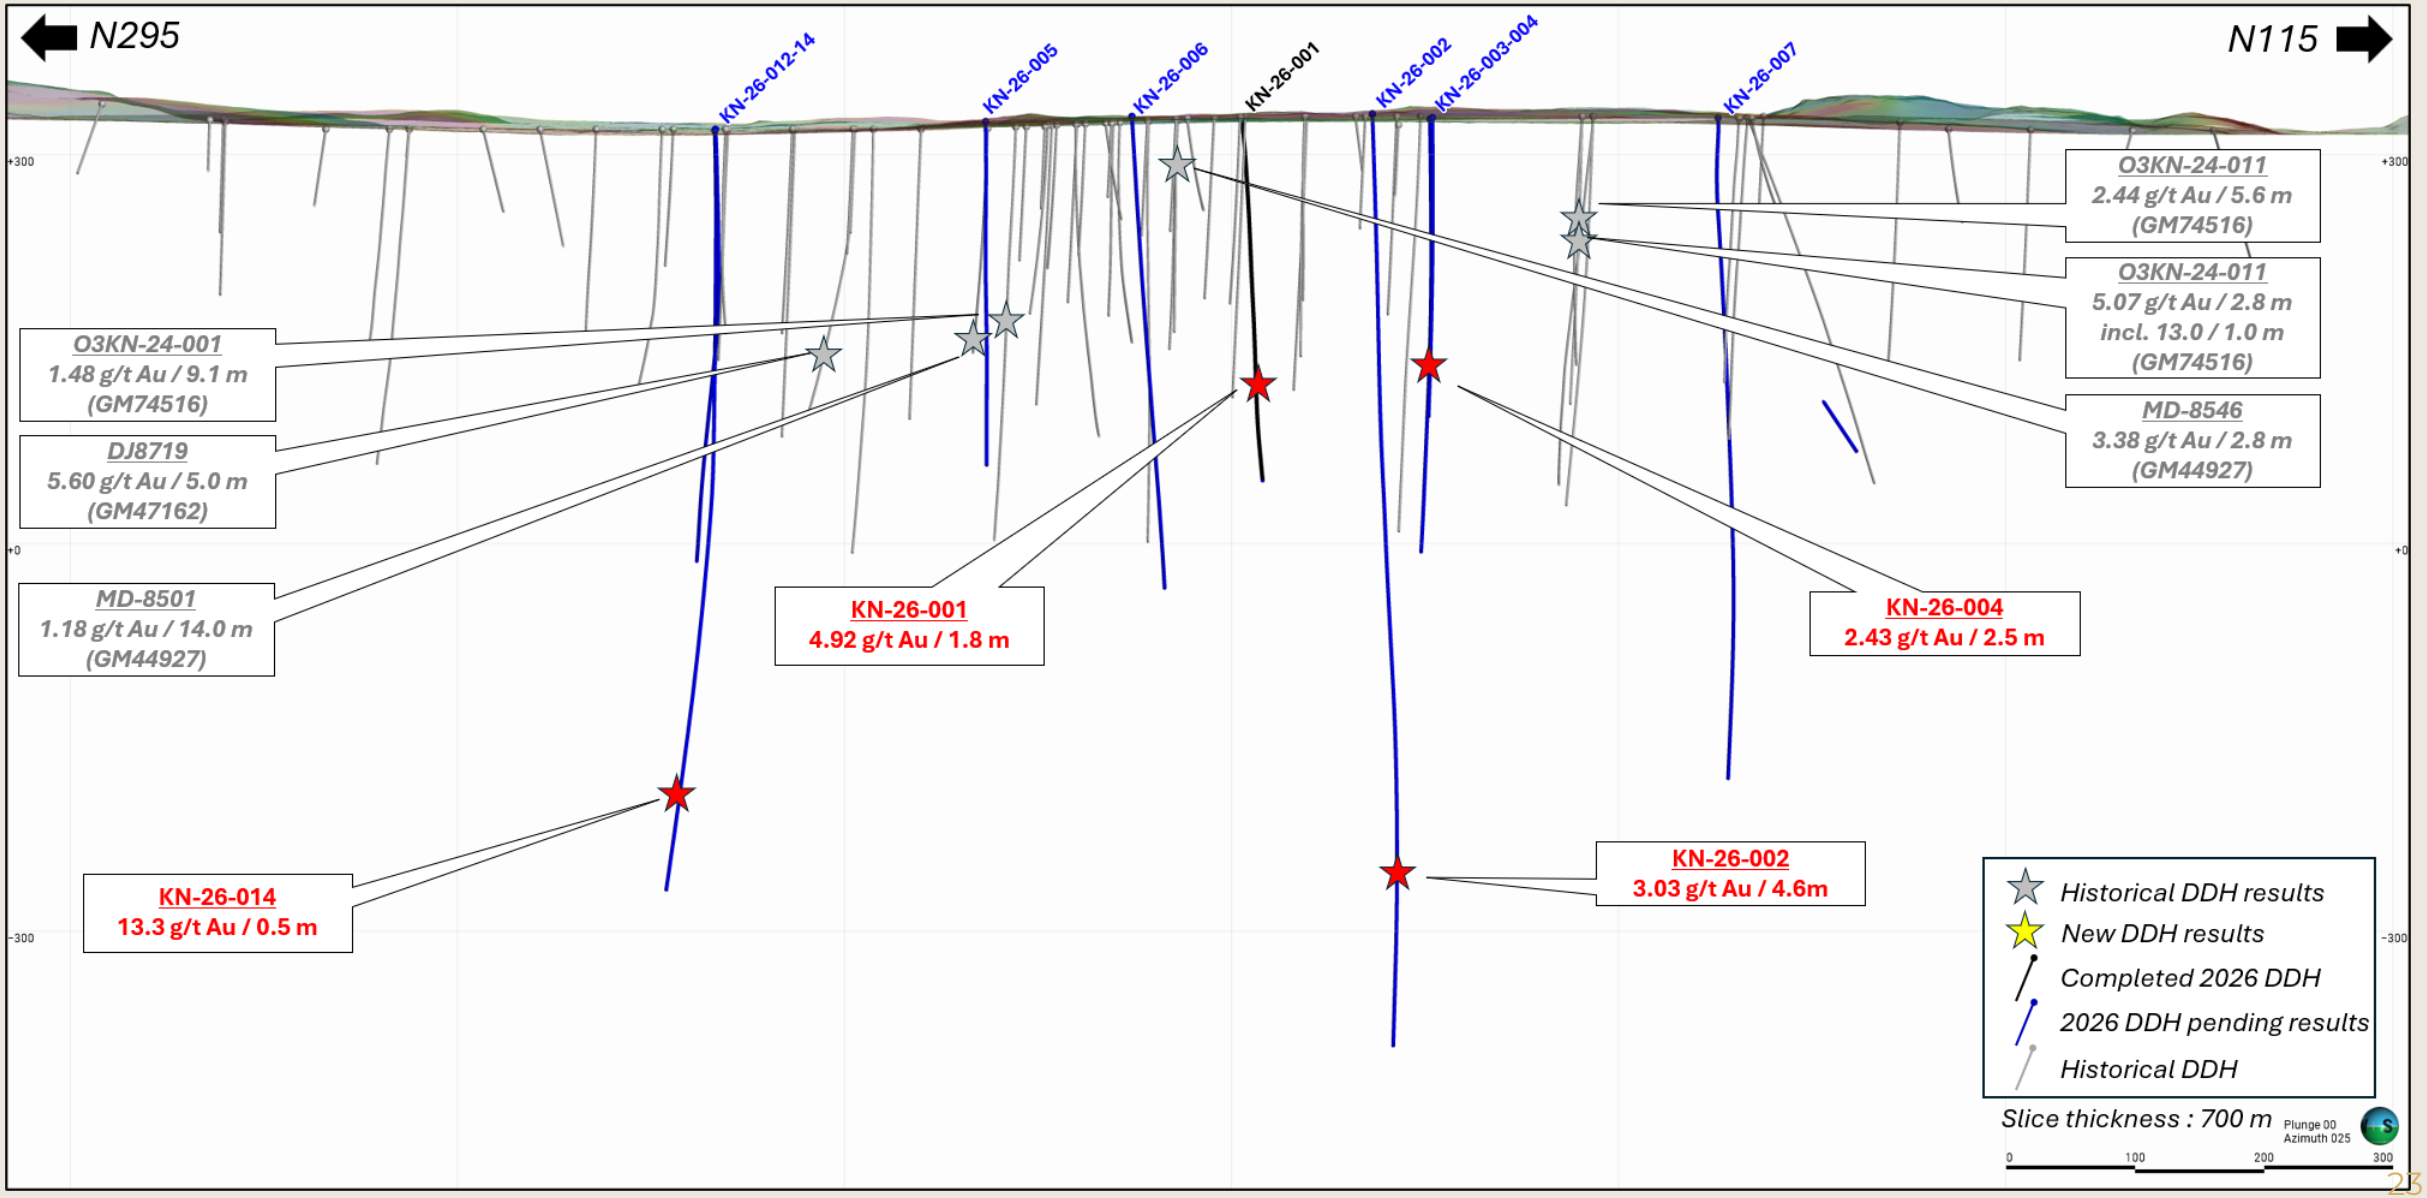

- **Cameron Main**:
  10 km of Cameron shear, on strike with Cartwright & Flordin deposits.
- **Florence**: Gold associated to disseminated pyrite in a granodiorite & observed in the mafic volcanics.
- **IronGold** & **Desjardins**: Gold in folded BIF.
- **Ludger**: Silica+iron-rich sediments.

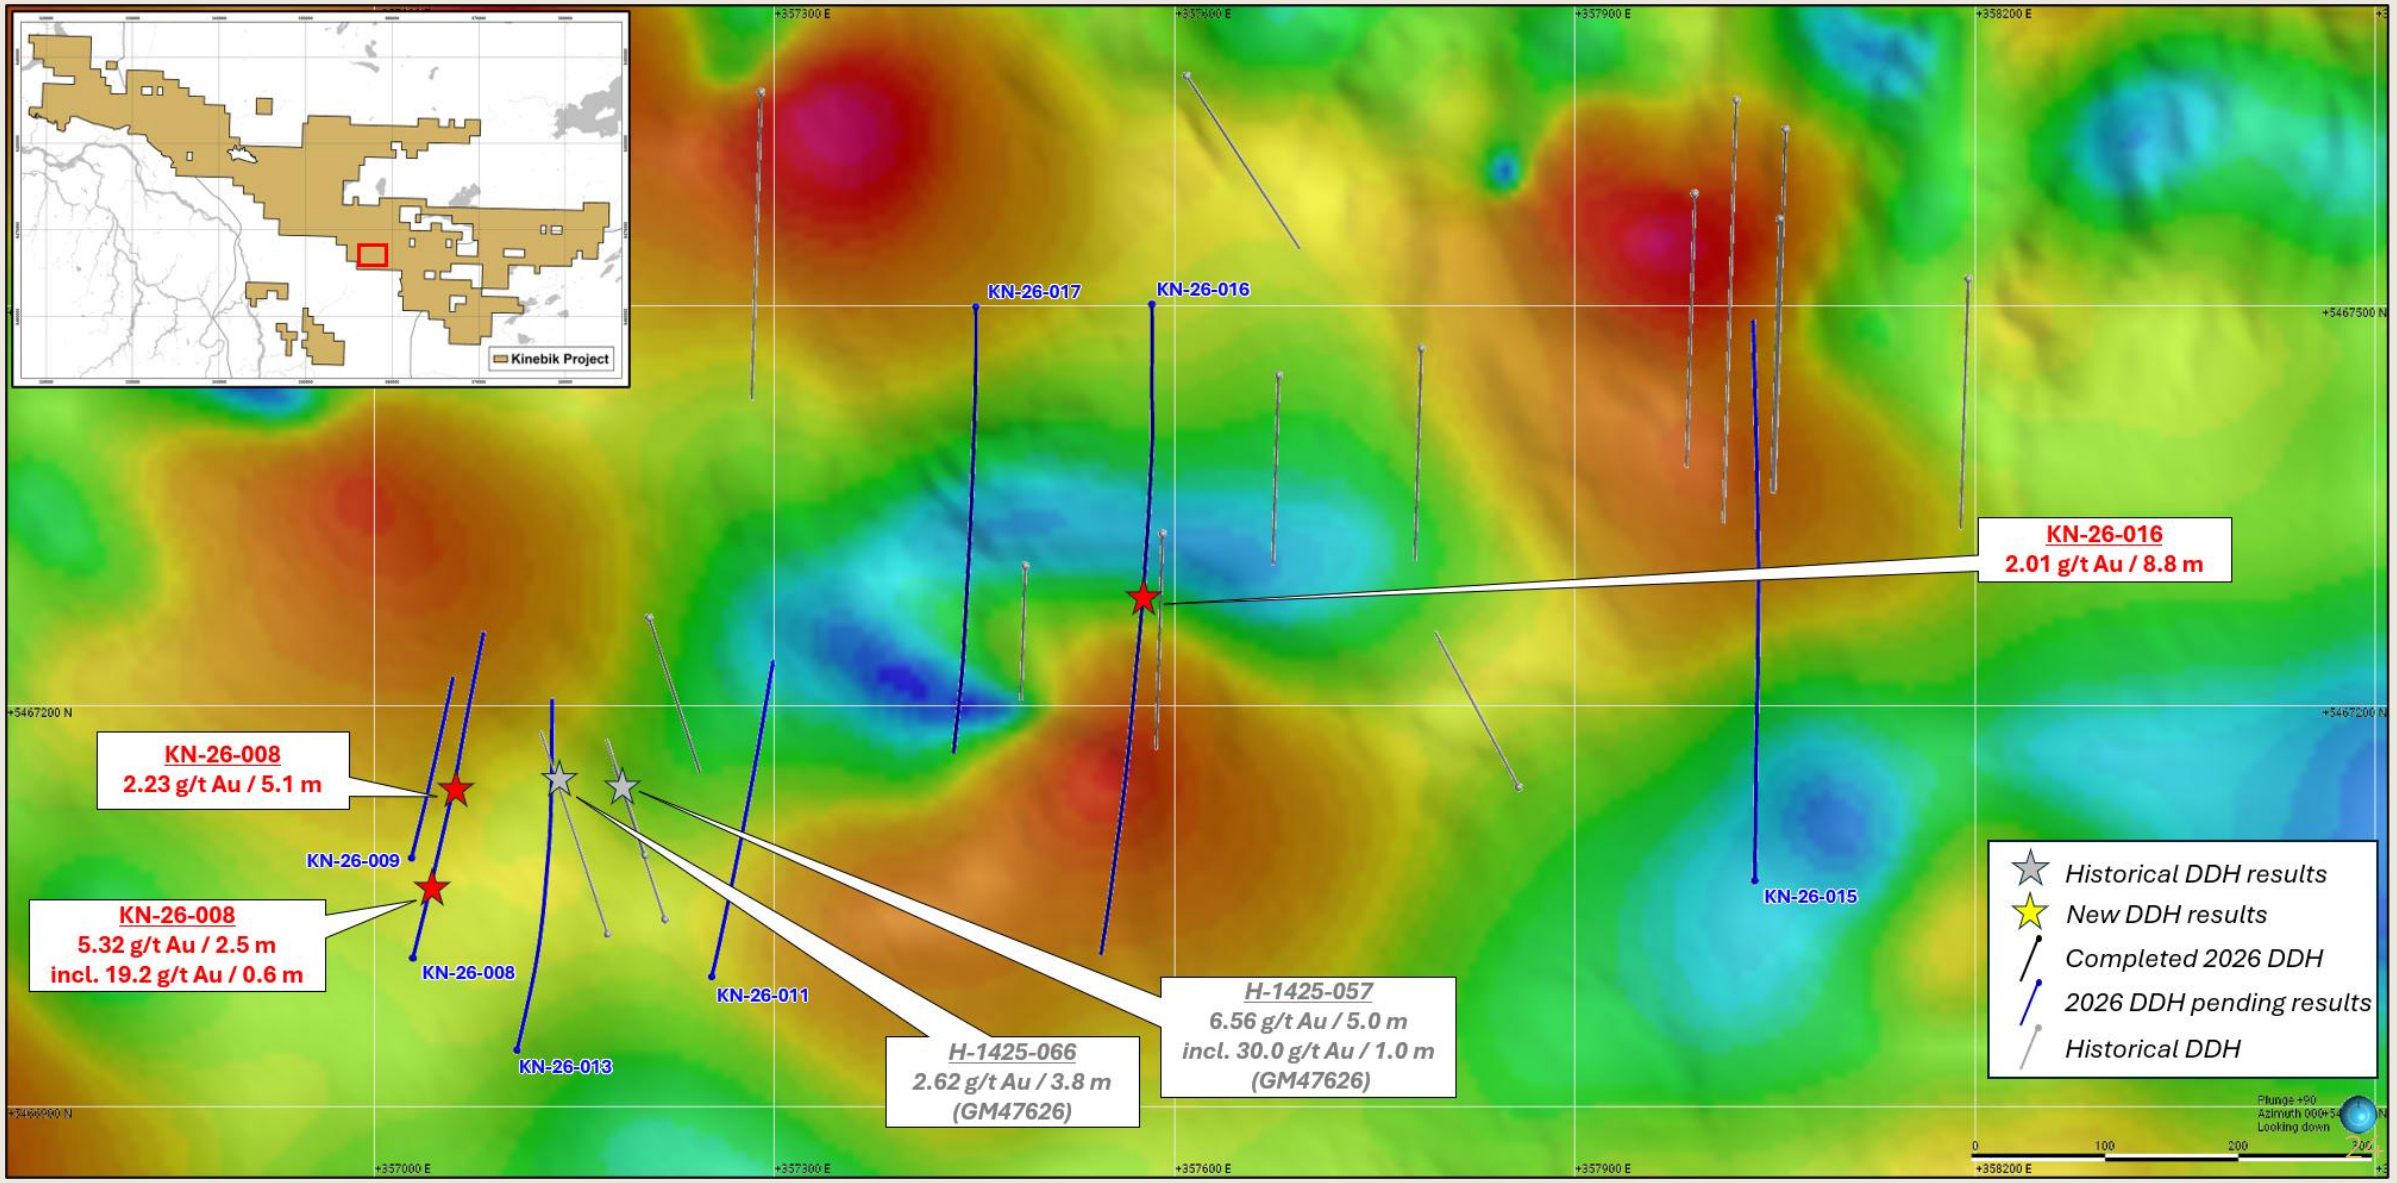

KINEBIK - CAMERON MAIN ZONE PLAN VIEW

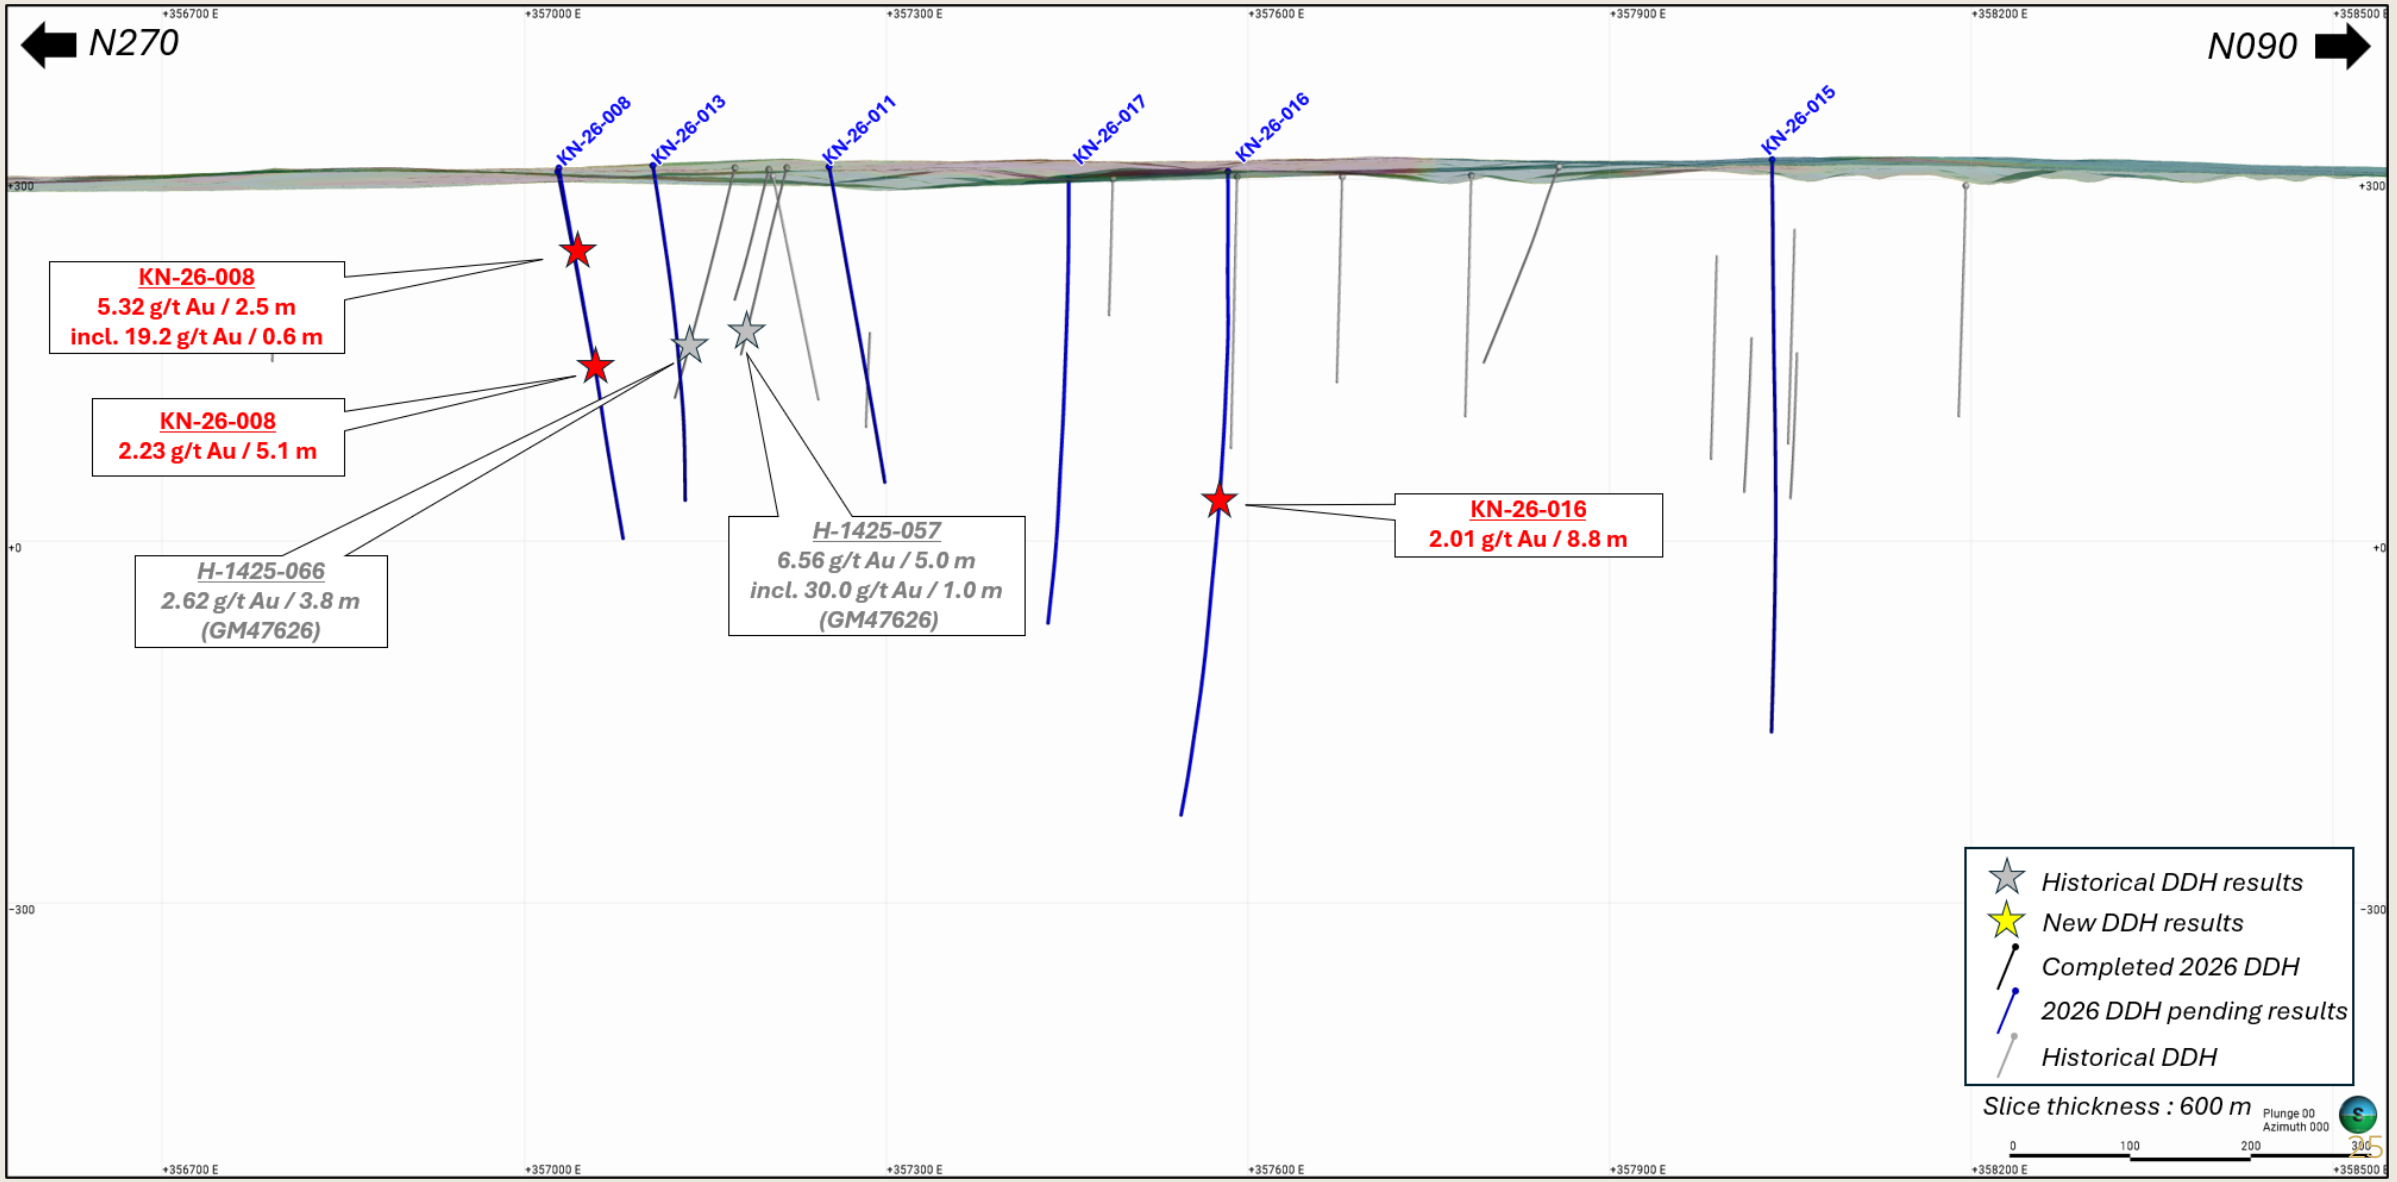

KINEBIK - CAMERON MAIN COMPOSITE LONG SECTION

KINEBIK - FLORENCE PLAN VIEW

KINEBIK - FLORENCE COMPOSITE LONG SECTION

LAUNAY PROJECT

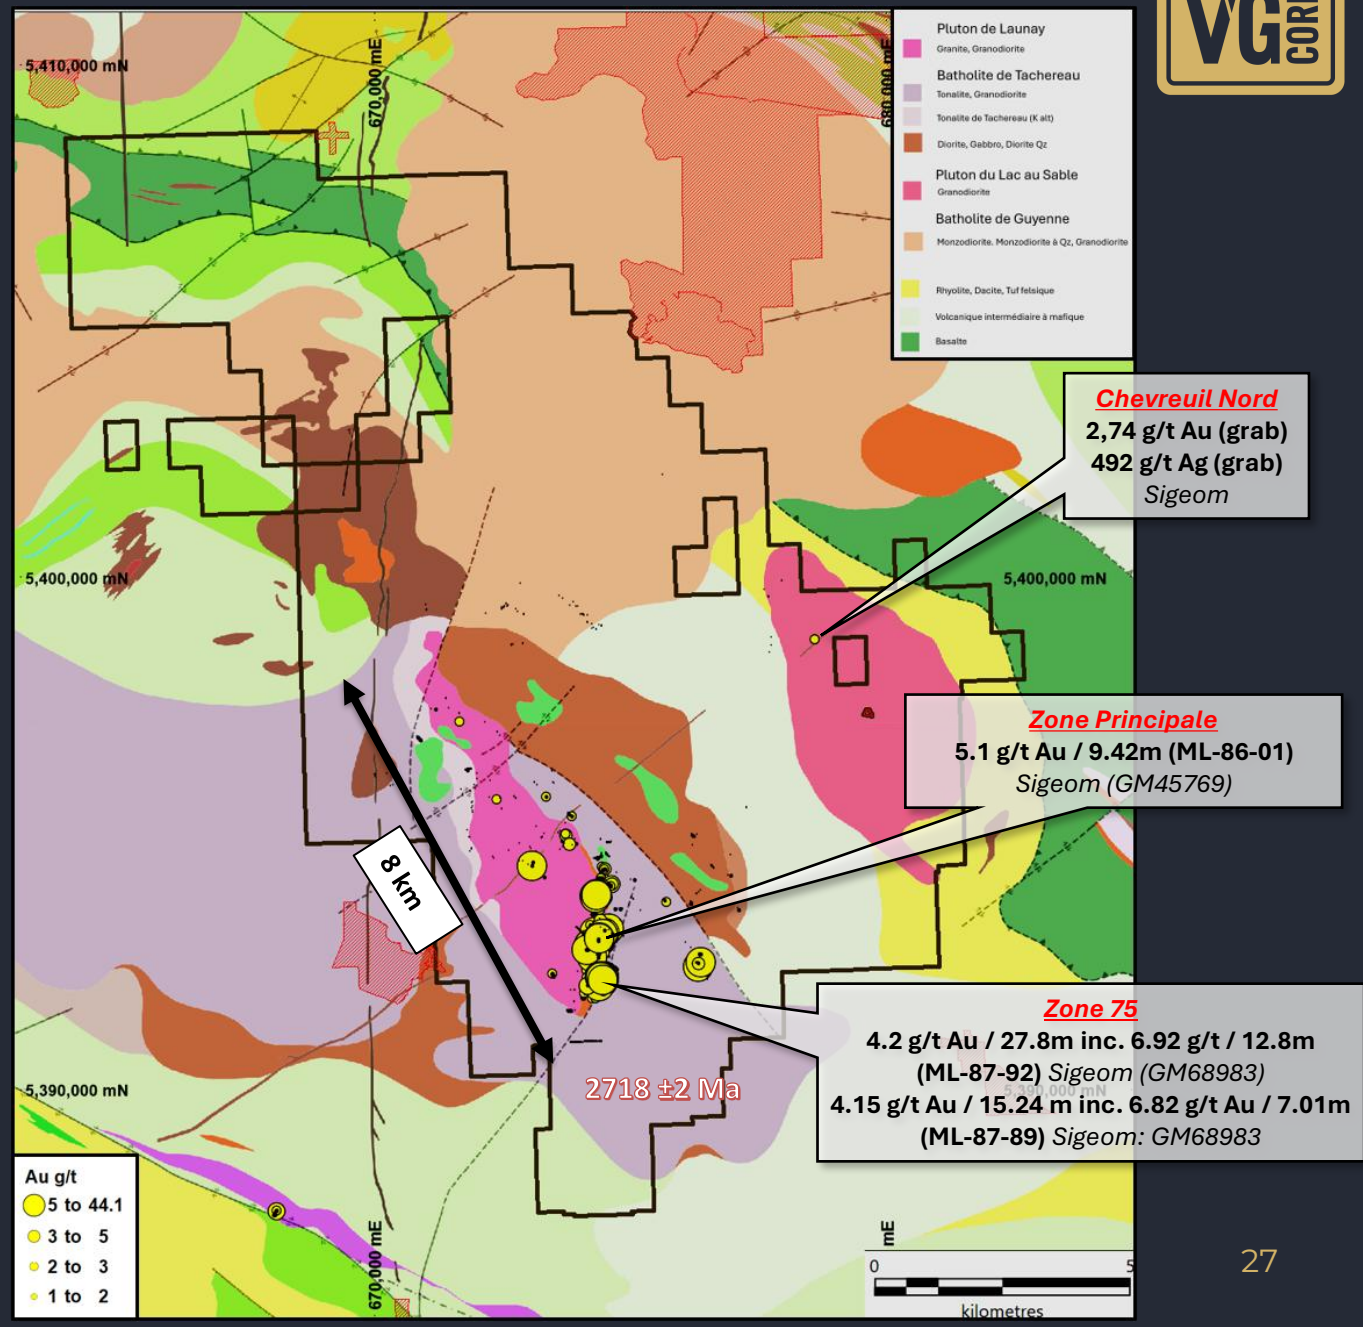

Highlights & Opportunities

- Located 43 km WNW of Amos, Quebec.
- 329 claims covering > 182 km^2.
- Excellent location and low-cost exploration.
- Orogenic Au and Gold associated with felsic intrusion.
- Multiple new gold drilling targets.
- Close to infrastructure.
- Under acquisition from AEM.

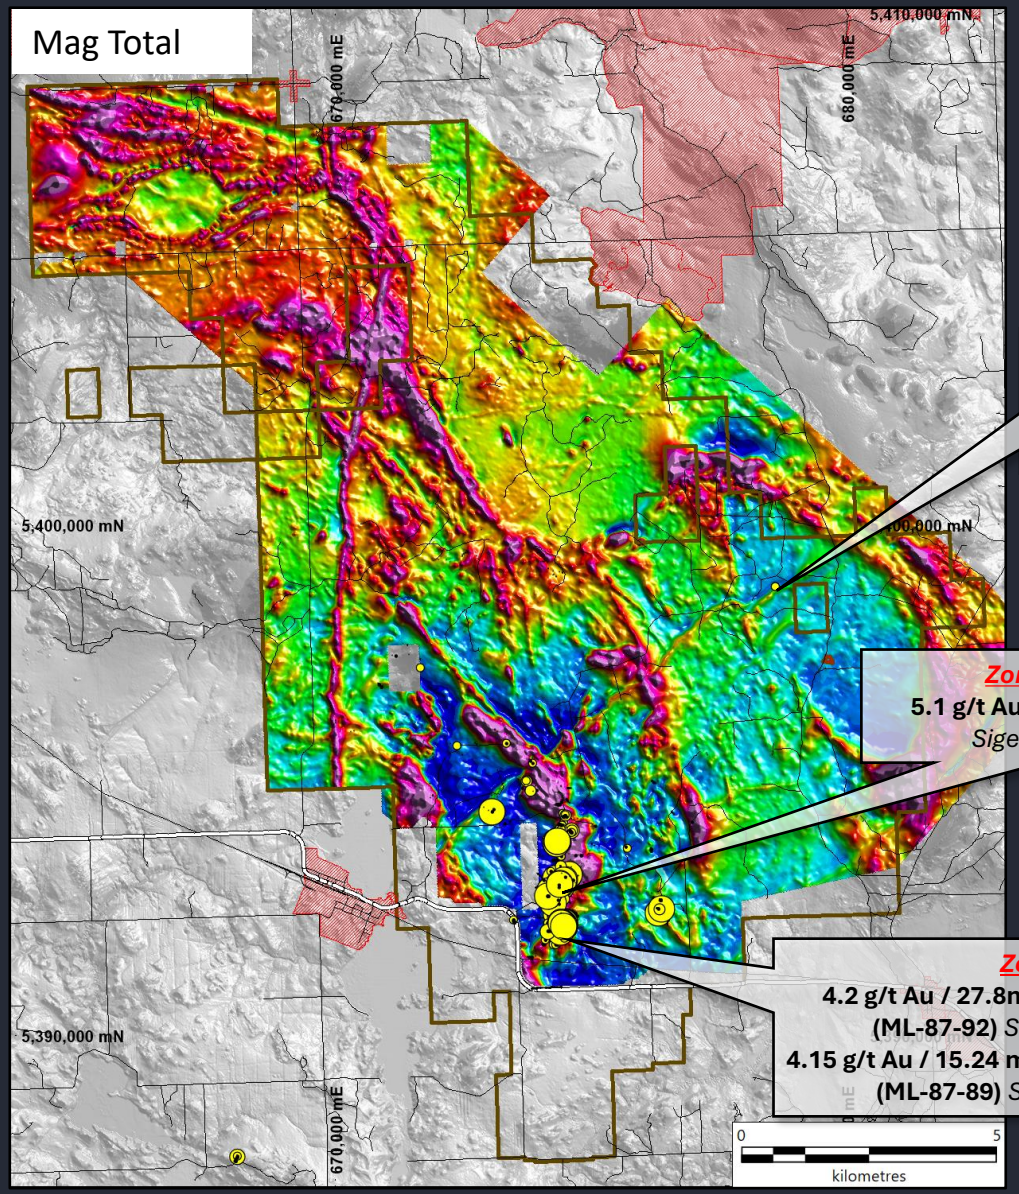

LAUNAY PROJECT

- **Launay Pluton**: Porphyry Intrusion of granite-granodiorite crosscutting Taschereau Batholith (2718 +/- 2 Ma).
- Gold values on the East contact of the Launay Pluton with batholith intrusion.
- North Portion poorly explored.
- **Lac au Sable Pluton**: Granodiorite associated with syntectonic intrusion emplace between 2703 – 2690 Ma).

LAUNAY PROJECT

- Several intrusion occurrence on the Magnetic map.
- Several intrusion remain unexplored.

LAUNAY PROJECT

Mineralization

Gold mineralization typically occurs within 2 contexts:

With quartz/carbonate veins
Veins often associated with shear, fault and breccias zones. Sulfides, mainly pyrite, are usually present.

Disseminate sulphides
Gold within pyrite is found disseminated within felsic intrusive lithologies, usually rich in plagioclases.

Carbonatization, hematization and/or albitization are often associated to the gold mineralization.
